QUESTION 1

How do virtual networks that are natively isolated from each other provide support for overlapping IP address in a multi-tenant environment?

- A. By enabling isolation without using access control lists and firewall rules.
- B. By enabling isolation with the help of Active Directory (AD).
- C. By employing the spanning tree protocol.
- D. By implementing load balancing.

Correct Answer: A

QUESTION 2

What is the total volume of traffic per Distributed Logical Router (DLR) that is supported by the Equal Cost Multipath (ECMP) model?

- A. 20GB
- B. 50 GB
- C. 80 GB
- D. 40 GB

Correct Answer: A

QUESTION 3

An administrator has deployed Distributed Firewall to protect their infrastructure from security threats. Due to extreme loads on the network the CPU is saturated and the memory becomes full.

In this scenario, which mode does the Distributed Firewall enter?

- A. Secondary
- B. Fail open
- C. Proxy
- D. Fail close

Correct Answer: B

QUESTION 4

An organization has not yet implemented network virtualization in their IT infrastructure.

What are the two common management challenges organizations meet in their day-to-day administration? (Choose two.)

- A. Be susceptible to malware and virus vulnerabilities in the network
- B. Update physical network manually each time a new application is deployed.
- C. Spend more time in provisioning and decommissioning lab environments.
- D. Manage frequently occurring network requests manually

Correct Answer: BC

QUESTION 5

Which cloud environments are automated with the help of VMware NSX (Choose two)?

- A. Intranet Cloud
- B. Public Cloud
- C. Private Cloud
- D. Developer Cloud
- E. Multi-Tenant Infrastructure

Correct Answer: DE
