### QUESTION 1

Scenario: While updating the XenServer tools of the vDisk on the master target device, a Citrix Administrator receives the following error:

STOP:0x0000007B

How should the administrator update the master target device and vDisk created from that device?

- A. Perform a Reverse image.
- B. Restart the Stream service.
- C. Downgrade the XenServer tools.
- D. Change the write cache location to cache on server.

Correct Answer: A

---

### QUESTION 2

What should a Citrix Administrator create before configuring Power Management for a desktop group?

- A. A policy
- B. A hosting connection
- C. An Administrator with the Host Administrator role
- D. An Administrator with the Machine Catalog Administrator role

Correct Answer: B

---

### QUESTION 3

Scenario: A Citrix Administrator manages a XenDesktop environment where Machine Creation Services is used to create and deploy Server and Desktop OS machines. After an application update on the master image for the Desktop OS machines, users report functionality issues with their Desktop OS machines. What should the administrator do to resolve the reported issue?

- A. Reset user profiles using Citrix Director.
- B. Select 'Revert to' in the Snapshots menu in XenServer.
- C. Restart the Desktop OS machines using Citrix Director.
- D. Use the 'Rollback Machine Update' option in Citrix Studio.

Correct Answer: D

---

#### QUESTION 4

Scenario: Users report slow application launch times after a master image update. These users have critical deadlines and need access to their machines as soon as possible. How should a Citrix Administrator resolve the slow application launch times?

- A. Revert to the previous image.
- B. Reset user profiles using Citrix Director.
- C. Restart the impacted Desktop OS machines.
- D. Migrate the Desktop OS machines to a different host.

Correct Answer: D

---

#### QUESTION 5

What should a Citrix Administrator do to ensure that a vDisk is properly load balanced across multiple Provisioning Services servers in an environment where the Streaming Service is working properly?

- A. Go to the vDisk properties to ensure that load balancing is set.
- B. Rebalance the target devices across the Provisioning Services servers.
- C. Create a separate store and assign servers from different sites to load balance the vDisk.
- D. Check the association of the servers to a site to ensure all servers are configured to separate sites.

Correct Answer: B
