QUESTION 1

A Citrix Administrator needs to configure Store Front for High Availability in order to aggregate resources from multiple deployments.

Which two requirements or restrictions should the administrator consider when deciding to set up highly available multi-site configurations for stores? (Choose two.)

- A. App Controller applications can also be aggregated as long as they have the same name and path on each server
- B. StoreFront only provides access to backup deployments for disaster recovery when all the primary sites are available
- C. While running `Propagate task`, the administrator CANNOT make any further changes until all the servers in the group have been updated
- D. If synchronization of user's application subscriptions is configured between stores on separate StoreFront deployments, the stores must have the same name in each server group

Correct Answer: CD

QUESTION 2

Which command-line interface (CLI) utility can a Citrix Administrator use to release the assigned User/ Device licenses to complete a hardware refresh project?

- A. Imadmin
