QUESTION 1

Which two steps must a Citrix Administrator take to allow additional users to access resources using the NetScaler Gateway Plug-in after the administrator installs the universal license on the NetScaler Gateway? (Choose two.)

A. Set ICA Proxy to OFF.

B. Configure Citrix Receiver Home Page.

C. ChangetheauthenticationAAAsettings.

D. Set Single Sign-on with Windows to OFF.

Correct Answer: AC

QUESTION 2

Scenario: A Citrix Administrator would like to delegate administration of the Citrix NetScaler to a Microsoft Active Directory group called ICitrix-NetScaler-AdminsI. The group already exists in Active Directory. The Citrix- NetScaler-Admins group must have full-control permission on the Citrix NetScaler to perform their tasks. The administrator has successfully configured an LDAP authentication server and authentication policy. The authentication policy is already globally bound. How should the administrator proceed on the Citrix NetScaler?

A. Create an AAA User called Citrix-NetScaler-Admins and select IExternal AuthenticationI.

B. Create a group called Citrix-NetScaler-Admins. Make the group a member of the operator command policy.

C. Create a group called Citrix-NetScaler-Admins. Make the group a member of the superuser command policy.

D. Create an AAA group called Citrix-NetScaler-Admins. Create an ALLOW authorization policy and bind it to the Citrix-NetScaler-Admins AAA Group.

Correct Answer: C

QUESTION 3

Scenario: A NetScaler Gateway is configured to use RADIUS for authentication. A Citrix Administrator

needs to know whichNetScalerIP(NSIP)addressisusedforoutgoingRADIUStraffic.

How can the administrator verify which NSIP is used?

A. Check the ns.log file.

B. Use the ping command.

C. Check the messages log file.

D. Use the nstcpdump.sh command.

Correct Answer: D

QUESTION 4

A Citrix Administrator is replacing an expired SSL certificate bound to a virtual server. The established ICA connections to the virtual server will display as . (Choose the correct option to complete the sentence.)

A. logged off

B. terminated

C. disconnected

D. uninterrupted

Correct Answer: C

QUESTION 5

Scenario: A Citrix Administrator has implemented a remote access solution using NetScaler. The

administrator is alerted with information indicating users attempting to access resources through NetScaler

are unable to authenticate.

How can the administrator identify whether the authentication process is the cause?

A. Review the system log on the Domain Controller.

B. Execute the Insconmsg -d eventI command on the NetScaler.

C. Use the Icat aaad.debugI command on the NetScaler shell.

D. Use the Ivi jvarjlogjauth error.logI command to review saved events on the NetScaler shell.

Correct Answer: C
