QUESTION 1

Scenario: A XenDesktop deployment with 200 virtual desktops has a host connection to a single XenServer pool configured for thin provisioning. A Citrix Engineer has been instructed to implement IntelliCache.

Which steps must the engineer take to meet the requirements stated in the scenario?

- A. Modify the existing host connection and enable IntelliCache.
- B. Create a new resource using the existing host connection and enable IntelliCache.
- C. Delete the existing resource, create a new one with the same name and enable IntelliCache.
- D. Delete the existing host connection, create a new connection to the same pool and enable IntelliCache.

Correct Answer: B Section: (none)

QUESTION 2

Scenario: Citrix Profile Management is deployed in a XenDesktop environment. A Citrix Engineer set up group policies and configured the .INI file on Desktop OS machines for Citrix Profile Management.

What will take precedence if there is a conflict?

- A. Local Policy
- B. Group Policy
- C. UPMPolicyDefaults_All.ini
- D. XenDesktop Policy set in Citrix Studio

Correct Answer: B Section: (none)

QUESTION 3

A Citrix Engineer must change the write cache method from '\\Cache on device hard drive\\' to '\\Cache in device RAM with overflow on hard disk\\'.

To assist in determining the appropriate amount of RAM cache required, what would the engineer need to check to determine the current write cache size?

- A. The size of the local pagefile
- B. The size of the writecache file in the vDisk store
- C. The size of the .vdiskcache file on the device hard disk
- D. The size of the RAM and Pagefile combined in Task Manager

Correct Answer: C Section: (none)

QUESTION 4

Where should a Citrix Engineer set up a restart schedule for a pool of Server OS machines?

- A. Policy within Citrix Studio
- B. Delivery Group properties
- C. Virtual machine properties
- D. Machine catalog properties

Correct Answer: B Section: (none)

QUESTION 5

Scenario: A Citrix Engineer needs to configure load balancing for two StoreFront servers. Traffic must be encrypted between client machines and the StoreFront servers and the health of the stores must be monitored. The StoreFront servers are already configured properly using the default ports for encrypted traffic.

Which two steps does the engineer need to take before creating the load-balancing virtual server to use traffic encryption between client machines and the StoreFront servers? (Choose two.)

- A. Create an SSL service group containing the StoreFront servers listening on port 443.
- B. Create an SSL_TCP service group containing the StoreFront servers listening on port 443.
- C. Create and configure a new monitor with type=STOREFRONT and select the Secure checkbox.
- D. Create an SSL_DIAMETER service group containing the StoreFront servers listening on port 443.
- E. Create and configure a new monitor with type=STOREFRONT and select the IP Tunnel checkbox.
- F. Create and configure a new monitor with type=CITRIX-AG and select the LRTM (Least Response Time using Monitoring) checkbox.

Correct Answer: AC Section: (none)
