### QUESTION 1

Users complain that it is taking longer to access applications now than it did last week.

What is the best way to determine what changed from last week to this week?

- A. Review Configuration Logging data.
- B. Review EdgeSight troubleshooting data.
- C. Review EdgeSight Active Application Monitoring data.
- D. Review published application properties from a previous version of the datastore with the current version.

Correct Answer: A

---

### QUESTION 2

Scenario: A Citrix Engineer added a second Provisioning Services server to an existing Provisioning Services Site for high availability. The engineer copied the virtual hard drive (VHD) files to the store on the new Provisioning Services server.

After doing that, the second server did NOT show the disk as `available` under replication status.

Which is vDisk replication status failing for the new server?

- A. The vDisk is still in Standard mode.
- B. The disk has to be replicated through Distributed File System Replication (DFSR).
- C. The manifest file has NOT been created.
- D. The .PVP file has NOT been copied.

Correct Answer: D

### QUESTION 3

Call center users accessing a XenApp hosted desktop by means of thin client devices are unable to see a new multi-function printer in their session.

What can the administrator do to resolve this?

- A. Enable the auto-create all client printers policy.
- B. Add the new printer to the session printers policy.

- C. Install the correct printer drivers on the XenApp servers.
- D. Verify that the new printer has been added to the default printer policy.

Correct Answer: B

---

#### QUESTION 4

Scenario: A Citrix Engineer recently implemented a Provisioning Services environment, which still has all the default configurations and uses a standalone SQL Server 2008 R2 machine to host the Farm database. No shared storage is available.

Management would like to expand the environment so that it can be used to support several critical use cases within the organization. The following requirements must be met regards to the Farm database:

- The solution must ensure that all Farm functionality is retained if the primary database server becomes unresponsive.
- The solution must NOT require manual administrator intervention during the failure.
- The solution must NOT require any upgrades to existing FARM components.

Which configuration will meet all the requirements of this scenario?

- A. SQL Always On Availability Group
- B. Offline database support
- C. SQL Mirroring
- D. SQL Clustering

Correct Answer: B

---

#### QUESTION 5

Scenario: An administrator is deploying a new server to host the latest Citrix Web Interface version. During a test, the administrator has NOT been able to authenticate and access the list of published applications. Which two actions must the administrator take to debug the Citrix Web Interface? (Choose two.)

- A. Specify a valid path to generate a log file.
- B. Edit the web.config file to enable the debug feature.
- C. Use the Process Monitor tool to monitor the IIS processes.
- D. Use the Windows Debug tool to generate and analyze a memory dump.

Correct Answer: AB
