QUESTION 1

Why is a design with 12 NetScaler appliances, in which each datacenter deploys an HA pair in the internal network for load balancing and an HA pair in the DMZ for Gateway traffic, the best remote access design?

- A. It allows end users to connect to their primary datacenter through a secure, reliable, and cost-effective solution.
- B. It provides redundancy, while optimizing external WAN traffic.
- C. It segments the Gateway and load-balancing features of the NetScaler appliances.
- D. It allows for the expected expansion of remote access usage and provides SSL VPN functionality for future needs.

Correct Answer: D

QUESTION 2

Why does using vDisk Update Management help manage the image release process?

- A. Because it automatically upgrades virtual desktops to the latest operating system version
- B. Because it provides centralized, automated single image management
- C. Because it is compatible with the Microsoft VHD specification
- D. Because it automatically deploys the latest target device drivers

Correct Answer: B

QUESTION 3

Scenario: The company needs to ensure that the provisioning traffic does NOT interfere with the existing PXE solution. The Provisioning Services servers will be connected to a 10 Gbps network.

How should the architect implement a highly available Provisioning Services server on dedicated VLANs?

- A. By installing multiple NICs in one Provisioning Services server in each datacenter
- B. By deploying one Provisioning Services server in the primary and one in the secondary datacenter
- C. By deploying two Provisioning Services servers in each datacenter
- D. By using NetScaler with GSLB to load balance the Provisioning Services servers in each datacenter

Correct Answer: C

QUESTION 4

Which tool should a Citrix Architect use to investigate slow logon times for the Executives/Management and Back Office

end-user groups in the Houston office?

- A. CDFControl utility
- B. Citrix EdgeSight console
- C. Citrix AppCenter console
- D. Group Policy Management console

Correct Answer: C

QUESTION 5

Scenario:

CGE is experiencing numerous issues with its existing profile management solution. The Citrix Architect managing the project is tasked with designing a solution that alleviates existing issues and, if possible, minimizes the loss of existing customizations. Configuration changes need to be implemented quickly and with minimal complexity.

Why does enabling '\\Offline profile support\\' when configuring Citrix Profile management to allow standardization of profiles benefit CGE\\'s Sales end-user group?

- A. It allows faster logon/logoff.
- B. It minimizes the required storage needed for folder redirection.
- C. It simplifies home drive cleanup.
- D. It improves data accuracy in volatile environments.

Correct Answer: A
