QUESTION 1

Which two budgetary items should the architect consider to meet the needs of remote users in the new environment? (Choose two.)

- A. Microsoft licenses
- B. NetScaler infrastructure
- C. Additional mobile devices
- D. Two-factor authentication solution

Correct Answer: BD

QUESTION 2

The company is implementing XenDesktop globally for desktop virtualization. Why should an architect recommend multiple controllers in each datacenter?

- A. To protect against controller database failure
- B. To enable users to maintain uninterrupted connection to their desktops
- C. To protect users from WAN link failure
- D. To ensure that new desktop and application sessions can be launched

Correct Answer: D

QUESTION 3

Scenario:

CGE decided to virtualize its infrastructure workloads and provide a virtual solution to all end users. The

infrastructure workloads include Delivery Controllers, StoreFront servers, License Servers, and Microsoft SQL Servers for databases. Why is creating a resource pool comprising a maximum of 16 XenServer hosts, using a shared storage repository to provide XenMotion and high availability, and replicating meta information to the disaster recovery site the best design solution?

- A. It addresses all customer requirements by ensuring appropriate design of resource pools, high availability for critical workloads, and a new storage solution for disaster recovery purposes.
- B. It ensures simple setup with a built-in failover design.
- C. It allows virtual workloads to fail over to a failover site for disaster recovery purposes.
- D. It optimizes performance and provides centralized management.

Correct Answer: C

QUESTION 4

Which two manually performed tasks can be streamlined by implementing a Citrix environment? (Choose two.)

- A. Database backup
- B. Application patching
- C. Security assessment
- D. Certificate management
- E. Operating system installation

Correct Answer: BE

QUESTION 5

Scenario:

CGE needs to define its management process for desktop image releases. Some groups need a process for version control that includes thorough testing prior to production. How should the architect use Provisioning Services to design a release management scheme that facilitates rollbacks?

- A. By enabling vDisk Update Management
- B. By using vDisk versions
- C. By using snapshots
- D. By using the Windows Automatic Install Kit (WAIK)

Correct Answer: B
