### QUESTION 1

Scenario: CGE needs to define its management process for desktop image releases. Some groups need a process for version control that includes thorough testing prior to production. Why does using Hypervisor templates and leveraging the Hypervisor API to deploy desktops from templates help manage the image versioning process?

- A. It allows for the automatic upgrade of the virtual desktops to the latest OS version.
- B. It provides centralized, automated, single-image management.
- C. It facilitates consistent deployment of base images.
- D. It allows for templates to be stored on shared or local storage.

Correct Answer: B

---

### QUESTION 2

Scenario: The company is designing a cost-efficient environment for the call center workers. The IT department is replacing the existing thin clients with newer models.

How should the architect recommend that the Synchronizer be deployed?

- A. By deploying a Hyper-V virtual appliance
- B. By installing the Synchronizer software on a Hyper-V server
- C. By installing a Synchronizer virtual appliance on XenServer
- D. By booting from the Synchronizer ISO image

Correct Answer: C

---

### QUESTION 3

What are the benefits of using local VMs?

- A. It retains the single image management function while allowing users to install applications
- B. Because it enables the creation of a database to store logs
- C. It has a low storage performance requirement and high user density
- D. It delivers low-cost and high application compatibility

Correct Answer: A

---

### QUESTION 4

What should a Citrix Architect recommend to ensure that streaming traffic is segmented and highly available?

- A. Provisioning Services servers on a shared VLAN.
- B. Provisioning Services servers using NetScaler.
- C. Provisioning Services servers on dedicated physical switches.
- D. Provisioning Services servers on dedicated VLANs.

Correct Answer: A

---

#### QUESTION 5

Scenario:

CGE decided to virtualize its infrastructure workloads and provide a virtual solution to all end users. The infrastructure workloads include Delivery Controllers, StoreFront servers, License Servers, and Microsoft SQL Servers for databases.

Which XenServer resource pool design should a Citrix Architect recommend to host all required workloads?

- A. Create two resource pools: one for the infrastructure workloads and one for the Server OS machine and Desktop OS machine workloads.
- B. Create one dedicated resource pool for the infrastructure, Server OS machine, and Desktop OS machine workloads.
- C. Create three resource pools: one each for the infrastructure, the Server OS machine, and the Desktop OS machine workloads.
- D. Create three dedicated resource pools: one for the Delivery Controllers, one for virtual Server OS machine and Desktop OS machine workloads, and one for infrastructure workloads.

Correct Answer: C
