Click the Exhibit button to view the requirements.

Requirement	Detail
Number of users	50
Environment	Proof of Concept (POC)
Redundancy	NOT required
Administrative Team	One IT administrator
Level of Performance	High
Image Management	Provisioning Services, non-persistent
Additional considerations	Should NOT impact production infrastructure

QUESTION 2

Scenario: During an assessment of a Citrix Infrastructure, a Citrix Architect finds that there are four active Sites. Each Site has one NetScaler SDX pair and two StoreFront servers in a server group to allow access for internal and external users. Users have to use different URLs when they access resources from different Sites. Single-factor authentication is used for both internal and external access. NetScaler appliances are placed in the DMZ with the appropriate firewall ports configured to allow Citrix traffic. Many of the internal users connect using corporate-owned laptops and some external users also connect using personal devices.

Management is planning to create one more Site and has asked the architect to perform scalability testing and advise how many NetScaler appliances are needed for the new Site.

What is the primary determining factor that the architect can use to help identify the appropriate NetScaler platform in this scenario?

A. SSL VPN

B. SSL Throughput

C. ICA Proxy

D. Ethernet Ports

Correct Answer: B

QUESTION 3

Scenario: A Citrix Architect must complete a XenApp and XenDesktop security assessment. After examining the network topology for the hypervisor hosts supporting the Virtual Delivery Agent (VDA) machines, the architect finds that some of the network connections are NOT following leading security practices.

Click the Exhibit button to view a high-level diagram which shows the connectivity between various components.
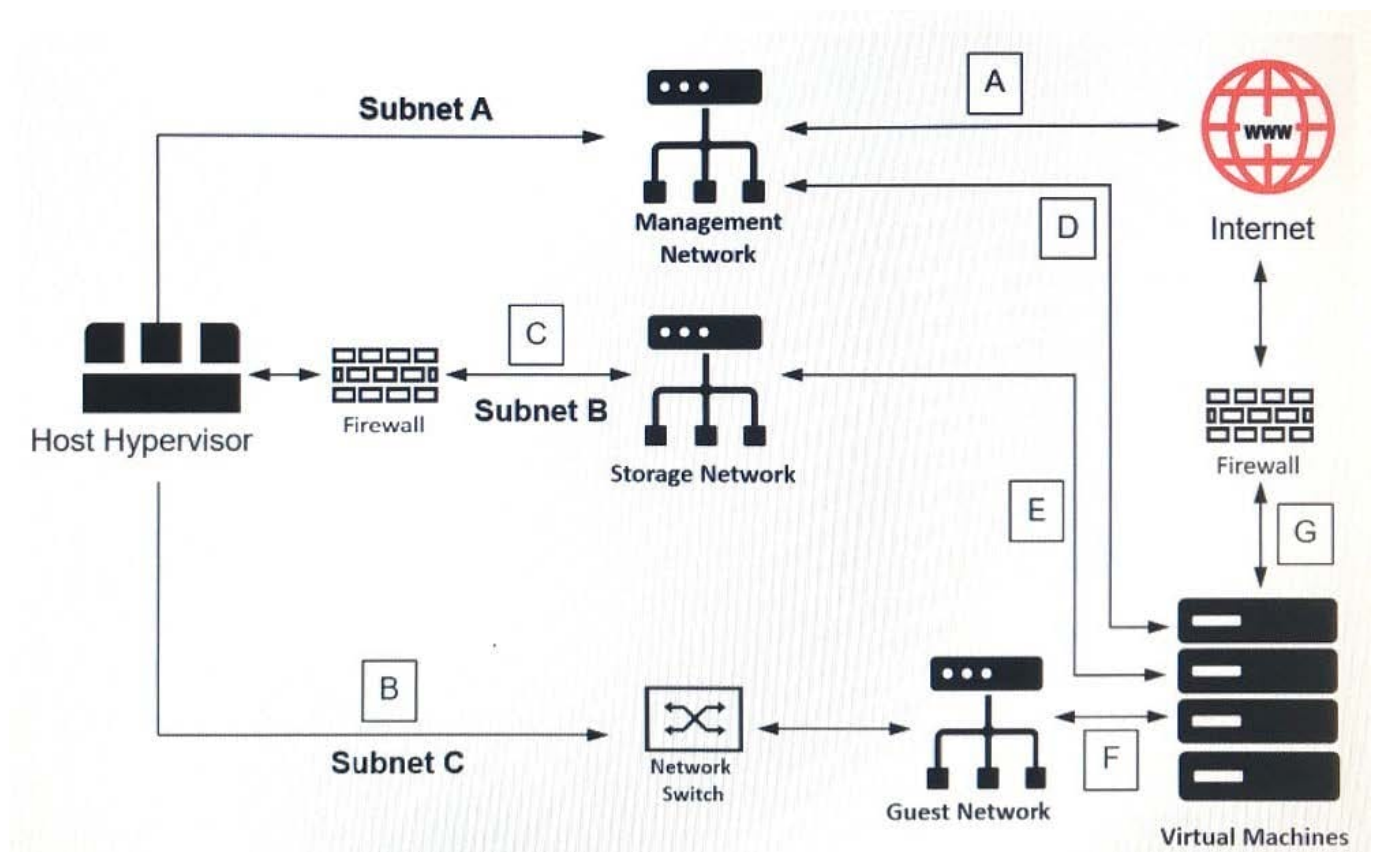

Which three of the labeled areas of the diagram represent connections which are NOT following Citrix leading security practices? (Choose three.)
