QUESTION 1

You execute these RMAN commands:

```
BACKUP VALIDATE DATABASE; BLOCKRECOVER CORRUPTION LIST;
```

What will these commands do?

- A. create a backup of the database and recover all corrupted blocks found in the backup
- B. perform a backup validation and list all logically and physically corrupt blocks in the database
- C. perform a backup validation and populate the memory structure used by the vscopy_corruption view with details of any corrupt blocks found
- D. perform a backup validation and populate the memory structure used by the vsDATABASE_BLOCK_CORRUPTION view, then recover any corrupt blocks
- E. create an image copy of the database and recover all corrupted blocks found in the image copy

Correct Answer: D

QUESTION 2

Identify two options that Oracle recommends while configuring the backup and recovery environment for your recovery catalog. (Choose two.)

- A. configuring control file autobackup to be ON
- B. backing up data filed only and not the archived redo log files
- C. running the recovery catalog database in NOARCHIVELOG mode.
- D. setting the retention policy to a REDUNDANCY value greater than 1
- E. backing up the recovery catalog to the same disk as that of the target database

Correct Answer: AD

QUESTION 3

Your database initialization parameter file has the following entry:

```
SEC_MAX_FAILZD_LOGIN_ATTEMPTS=3
```

Which statement is true regarding this setting?

- A. It drops the connection after the specified number of login attempts fail for any user.
- B. It is enforced only if the password profile is enabled for the user.

C. It locks the user account after the specified number of attempts.

D. It drops the connection after the specified number of login attempts fail only for users who have the SYSDBA privilege.

Correct Answer: A

QUESTION 4

Identify two advantages of using a recovery catalog instead of the control file of the target database in Recovery Manager (RMAN).

A. You can use RMAN stored scripts.

B. Recovery is faster if data is stored in catalog in addition to the control file.

C. You can store backup information of all registered databases in one place.

D. Database backups are automatically deleted when they are older than the specified time period.

Correct Answer: AC

QUESTION 5

In one of your online transaction processing (OLTP) applications, table keys are frequently updated and queries performed using many different operators.

In addition, reports are generated using complex joins with non-equality operators. What table organization is the best for this workload?

A. heap table

B. object table

C. external table

D. sorted hash clustered table

E. global temporary table

F. hash clustered table

Correct Answer: B
