QUESTION 1

Which two statements are true about a job chain? (Choose two.)

- A. A job chain can contain a nested chain of jobs.
- B. The jobs in a job chain cannot have more than one dependency.
- C. A job of the CHAIN type can be run using event-based or time-based schedules.
- D. The jobs in a job chain can be executed only by using the events generated by the Scheduler

Correct Answer: AC

QUESTION 2

The BACKUP_TAPE_IO_SLAVES parameter is set to FALSE for the database instance. Which statement is true while performing a tape backup in an RMAN session?

- A. The tape I/O performed is asynchronous
- B. The tape buffer is allocated from the System Global Area (SGA)
- C. The tape buffer is allocated from the Program Global Area (PGA)
- D. Oracle I/O uses an interrupt mechanism to determine when each I/O completes

Correct Answer: C

QUESTION 3

The DB_BLOCK_CHECKING parameter is set to FULL. What checks occur each time the DBWnprocess(es) writes?

- A. The Oracle database will check all data blocks by going through the data on each block, making sure the data is self-consistent.
- B. The DBWn and the direct loader will calculate a checksum and store it in the cache header of every data block when writing it to disk.
- C. The Oracle database will check data blocks belonging to the SYSTEM tablespace only, by going through the data on each block, making sure the data is self-consistent.
- D. The Oracle database will check data blocks belonging to the SYSAUX tablespace only, by going through the data on each block, making sure the data is self-consistent.
- E. The Oracle database will check data blocks in the SYSTEM and SYSAUX tablespaces only, by going through the data on each block, making sure the data is self-consistent.

Correct Answer: A

QUESTION 4

You are managing a 24*7 database. The backup strategy for the database is to perform usermanagedbackups.

Identify two prerequisites to perform the backups. (Choose two.)

- A. The database must be opened in restricted mode.
- B. The database must be configured to run in ARCHIVELOG mode.
- C. The tablespaces are required to be in backup mode before taking the backup.
- D. The tablespaces are required to be in read-only mode before taking the backup

Correct Answer: BC

QUESTION 5

You are in the middle of a transaction updating a very important table. The machine on which a database was running reboots because of power outage. This caused a database instance failure.

Which statement is true in this situation?

- A. The online redo log files and archived redo log files are required to accomplish the recovery
- B. The uncommitted transaction will be committed at the next startup of the database instance
- C. The uncommitted transaction is rolled back automatically at the next opening of the database
- D. The DBA has to perform the recovery on the database to recover the uncommitted transaction

Correct Answer: C
