QUESTION 1

You specified the warning and critical thresholds for a locally managed tablespace to be 60% and 70%, respectively.

From the tablespace space usage metrics, you find that the space usage has reached the specified warning threshold value, but no alerts have been generated.

What could be the reason for this?

- A. The event parameter was not set.
- B. The sql_trace parameter is set to false.
- C. Enterprise Manager was not used.
- D. The statistics_level parameter is set to basic.
- E. The timed_statistics parameter is set to false.

Correct Answer: D

QUESTION 2

Examine this command:

```
RMAN> BACKUP VALIDATE DATABASE;
```

Which three statements are true? (Choose three.)

- A. The command checks for blocks containing all zeros.
- B. The command checks for blocks containing an invalid checksum.
- C. The command checks for blocks containing a corrupt block header.
- D. The command checks for blocks that contain invalid column lengths.
- E. The command backs up the database regardless of the state of the blocks.
- F. The command backs up the database only if all blocks are valid.

Correct Answer: ABC

QUESTION 3

You plan to use the In-Database Archiving feature of Oracle Database 12c, and store rows that are inactive for over three months, in Hybrid Columnar Compressed (HCC) format.

Which three storage options support the use of HCC? (Choose three.)

- A. ASM disk groups with ASM disks consisting of Exadata Grid Disks.
- B. ASM disk groups with ASM disks consisting of LUNS on any Storage Area Network array
- C. ASM disk groups with ASM disks consisting of any zero padded NFS-mounted files
- D. Database files stored in ZFS and accessed using conventional NFS mounts.
- E. Database files stored in ZFS and accessed using the Oracle Direct NFS feature
- F. Database files stored in any file system and accessed using the Oracle Direct NFS feature
- G. ASM disk groups with ASM disks consisting of LUNs on Pillar Axiom Storage arrays

Correct Answer: AEG

HCC requires the use of Oracle Storage ?Exadata (A), Pillar Axiom (G) or Sun ZFS Storage Appliance (ZFSSA).

Note:

*

Hybrid Columnar Compression, initially only available on Exadata, has been extended to support Pillar Axiom and Sun ZFS Storage Appliance (ZFSSA) storage when used with Oracle Database Enterprise Edition 11.2.0.3 and above

*

Oracle offers the ability to manage NFS using a feature called Oracle Direct NFS (dNFS). Oracle Direct NFS implements NFS V3 protocol within the Oracle database kernel itself. Oracle Direct NFS client overcomes many of the challenges associated with using NFS with the Oracle Database with simple configuration, better performance than traditional NFS clients, and offers consistent configuration across platforms.

QUESTION 4

You notice a performance change in your production Oracle 12c database. You want to know which change caused this performance difference.

Which method or feature should you use?

- A. Compare Period ADDM report
- B. AWR Compare Period report
- C. Active Session History (ASH) report
- D. Taking a new snapshot and comparing it with a preserved snapshot

Correct Answer: B

The awrddrpt.sql report is the Automated Workload Repository Compare Period Report. The awrddrpt.sql script is located in the \$ORACLE_HOME/rdbms/admin directory.

Incorrect Answers:

A: Compare Period ADDM is used to perform a high-level comparison of one workload replay to its capture or to another replay of the same capture. Only workload replays that contain at least 5 minutes of database time can be compared using this report.

QUESTION 5

You wish to create jobs to satisfy these requirements:

1.
Automatically bulk load data from a flat file.
 2.
Rebuild indexes on the SALES table after completion of the bulk load.
- How would you create these jobs?
- A. Create both jobs by using Scheduler raised events.
 - B. Create both jobs using application raised events.
 - C. Create one job to rebuild indexes using application raised events and another job to perform bulk load using Scheduler raised events.
 - D. Create one job to rebuild indexes using Scheduler raised events and another job to perform bulk load by using events raised by the application.

Correct Answer: C
