- E. when issuing a CREATE INDEX statement after a CREATE TABLE statement completed successfully in the same session
- F. when issuing a DML statement after a DML statement failed in the same session

Correct Answer: ADE

A transaction begins when the first executable SQL statement is encountered. An executable SQL statement is a SQL statement that generates calls to a database instance, including DML and DDL statements and the SET TRANSACTION statement. A transaction ends when any of the following actions occurs: A user issues a COMMIT or ROLLBACK statement without a SAVEPOINT clause. Answer D A user runs a DDL command such as CREATE, DROP, RENAME, or ALTER. The database issues an implicit COMMIT statement before and after every DDL statement. If the current transaction contains DML statements, then Oracle Database first commits the transaction and then runs and commits the DDL statement as a new, single-statement transaction.

o SELECT do not have a transaction start/end. Check by command: SELECT XID AS "txn id", XIDUSN AS "undo seg", XIDSLOT AS "slot", XIDSQN AS "seq", STATUS AS "txn status" FROM V\$TRANSACTION;
