QUESTION 1

You are the Inventory Control Supervisor at your employer's East Coast facility. Your employer is a 3PL, and your customer is a large company that is also serviced out of the other 3PL facilities. As you start the shift, your Inventory Control team members inform you of a significant change in the RF Cycle Counting process.

Lost IBLPNs are now updates with a "00" lock code rather than the expected "LL" code.

Which scenario is causing this issue?

- A. You dismiss the concern because a change in the lock code has no impact on either the WMS Cloud or host inventories.
- B. Your counterpart at the 3PL's other facility changed one of the cycle counting company parameters and that impacted your workflow for that same company.
- C. An inventory team member in the other facility marked a lost case with "00" lock code causing all subsequent lost cases to be defaulted to the same code across all LPNs for all company/facility combinations.
- D. While counting LPNs at a location, one of your team members marked a lost case with the new lock code. The new lock code is stored in system memory and applied to all IBLPNs counted as "Lost".
- E. One of your inventory team members changed his/her RF parameter default lock code causing the same configuration change to propagate to all users in the facility.
