QUESTION 1

Consider the device-mapper-multipath package and configuration. Which statement is true?

- A. /etc/multipath.conf is created by the package installation process.
- B. /etc/multipath.conf must be created after installation by an administrator by copying from /usr/share/doc/device-mapper-multipath-/.
- C. mpathconf can modify the operating behavior of multipathing and persistent changes to the configuration file.
- D. The multipath command can modify the multipath service run-level configuration and persistent changes to the configuration file.

Correct Answer: D

QUESTION 2

What is the purpose of the in-addr.arpa domain that is used in a zone file for DNS name resolution in Oracle Linux?

- A. to implement reverse name resolution for IPv4
- B. to resolve nameserver names in the in-addr.arpa top-level domain
- C. to implement reverse name resolution for IPv6
- D. to resolve host names in the in-addr.arpa top-level domain

Correct Answer: C

Reference: <https://docs.oracle.com/cd/E19683-01/817-4843/dnsintro-94/index.html>

QUESTION 3

Examine the virt-install command.

```
# virt-install \  
--connect qemu:///system \  
--virt-type kvm \  
-- name test \  
-- ram 500 \  
--disk path =/var/lib/libvirt/images/test.img, size=4  
--cdrom /home/user01/Downloads/OracleLinux-R6-U5-Server-x86_64-dvd.iso \  
--os-variant oe16
```

Which two statements are true?

- A. The --connect option specifies the credentials for the hypervisor to use.
- B. The --name option specifies the name of the new guest virtual machine instance.
- C. The --ram option specifies the memory to allocate for a guest instance in MB.
- D. The --virtype option specifies that only the keyboard, video, and mouse are fully virtualized.
- E. The --disk option specifies the media to use as storage for the guest. The size of the storage will be 4 GB.

Correct Answer: AB

QUESTION 4

Which two statements are true about the configuration of kdump for capturing a dump image after a kernel crash?

- A. kdump uses kexec to reboot the failed kernel and then captures a dump image.
- B. The crashkernel boot parameter must be added to the kernel line in the /boot/grub.conf file to enable kdump.
- C. The memory used for crashkernel is always at the same physical address.
- D. kdump requires no parameters because it is enabled by default.
- E. kdump uses kexec to boot a second kernel, which then captures a dump image.

Correct Answer: AB

QUESTION 5

Examine the parameters shown using the sysctl command relating to panic situations: [root@WAYOUT etc]# sysctl ? |grep panic |grep -v hung kernel.panic = 0 kernel.panic_on_oops = 0 kernel.softlockup_panic = 0 kernel.unknown_nmi_panic = 0 kernel.panic_on_unrecovered_nmi = 0 kernel.panic_on_io_nmi = 0 kernel.panic_on_oom = 2 [root@WAYOUT etc]# sysctl ? |grep hung

kernel.hung_task_panic = 0 kernel.hung_task_check_count = 4194304 kernel.hung_task_timeout_secs = 120 kernel.hung_task_warnings = 10

Which two statements are true about system behavior?

- A. The kernel delays panic for a few seconds if a bug is encountered to allow the klogd kernel logging daemon to log the oops output.
- B. The kernel panics if a kernel thread sleeps in the TASK_UNINTERRUPTIBLE state for more than 120 seconds.
- C. The kernel attempts to continue if a bug is encountered.
- D. The kernel always panics if an out-of-memory condition arises.
- E. The kernel tries to kill some memory-consuming processes to avoid a panic if an out-of-memory condition arises.

F. The kernel panics if a user thread sleeps in the TASK_UNINTERRUPTABLE state for more than 120 seconds.

Correct Answer: BF
