100% Passing Guarantee
100% Money Back Assurance

Following Questions and Answers are all new published by Oracle
Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

You have received an email from your manager to provision new resources on Oracle Cloud Infrastructure (OCI). When researching OCI, you determined that you should use OCI Resource Manager. Since this is a task that will be done multiple times for development, test, and production. You will need to create a command that can be re-used.

Which CLI command can be used in this situation? (Choose the best answer.)

- A. `oci resource-manager stack create --tenancy-id \ --config-source prod.zip --variables file://variables.json \ --display-name Production stack build \ --description Creating new Production environment`
- B. `oci resource-manager stack update --compartment-id \ --config-source prod.zip --variables file://variables.json \ --display-name "Production stack build" \ --description Creating new Production environment`
- C. `oci resource-manager stack create --compartment-id \ --config-source prod.zip --variables file://variables.json \ --display-name Production stack build \ --description Creating new Production environment`
- D. `oci resource-manager stack update --tenancy-id \ --config-source prod.zip --variables file://variables.json \ --display-name "Production stack build" \ --description Creating new Production environment`

Correct Answer: C

QUESTION 2

Your application is using an Object Storage bucket named `app-data` in the namespace `vision`, to store both persistent and temporary data. Every week all the temporary data should be deleted to limit the storage consumption.

Currently you need to navigate to the Object Storage page using the web console, select the appropriate bucket to view all the objects and delete the temporary ones.

To simplify the task you have configured the application to save all the temporary data with `/temp` prefix. You have also decided to use the Command Line Interface (CLI) to perform this operation.

What is the command you should use to speed up the data cleanup? (Choose the best answer.)

- A. `oci os object delete -ns vision -bn app-data --prefix /temp`
- B. `oci os object bulk-delete -ns vision -bn app-data --prefix /temp --force`
- C. `oci objectstorage bulk-delete -ns vision -bn app-data --prefix /temp --force`
- D. `oci os object delete app-data in vision where prefix = /temp`

Correct Answer: B

QUESTION 3

You have created an Autonomous Data Warehouse (ADW) service in your company's Oracle Cloud Infrastructure (OCI) tenancy and you now have to load historical data into it. You have already extracted this historical data from multiple data marts and data warehouses. This data is stored in multiple CSV text files and these files are ranging in size from 25 MB to 20 GB.

Which is the most efficient and error tolerant method for loading data into ADW? (Choose the best answer.)

- A. Create Auth token, use it to create an object storage credential by executing `DBMS_CLOUD.CREATE_CREDENTIAL`, using the web console upload the CSV files to an OCI object storage bucket, create the tables in the ADW database and then execute `DBMS_CLOUD.COPY_DATA` for each CSV file to copy the contents into the corresponding ADW database table.
- B. Create the tables in the ADW database and then execute SQL*Loader for each CSV file to load the contents into the corresponding ADW database table.
- C. Create Auth token, use it to create an object storage credential by executing `DBMS_CLOUD.CREATE_CREDENTIAL`, using OCI CLI upload the CSV files to an OCI object storage bucket, create the tables in the ADW database and then execute Data Pump Import for each CSV file to copy the contents into the corresponding ADW database table.
- D. Create Auth token, use it to create an object storage credential by executing `DBMS_CLOUD.CREATE_CREDENTIAL`, using OCI CLI upload the CSV files to an OCI object storage bucket, create the tables in the ADW database and then execute `DBMS_CLOUD.COPY_DATA` for each CSV file to copy the contents into the corresponding ADW database table.

Correct Answer: D

QUESTION 4

A subscriber of an Oracle Cloud Infrastructure (OCI) Notifications service topic complained about not receiving messages from the service.

Which option can help you debug this issue? (Choose the best answer.)

- A. If OCI Notifications service does not receive an acknowledgement from a subscription endpoint, the service drops the message. Confirm that the subscriber is always online to receive messages to help debug the issue.
- B. If OCI Notifications service does not receive an acknowledgement from a subscription endpoint, check the `NumberOfNotificationFailed` metric through the OCI Monitoring service for failed messages. Copy these messages to an OCI Object Storage bucket. Make sure the subscriber has the required credentials to access this bucket to help debug the issue.
- C. If OCI Notifications service does not receive an acknowledgement from a subscription endpoint, the service tries to redeliver messages for up to one day. Make sure that the subscriber is online at least once a day to help debug the issue.
- D. If OCI Notifications service does not receive an acknowledgement from a subscription endpoint, the service tries to redeliver messages for up to two hours. Configure an alarm on the `NumberOfNotificationFailed` metric through the OCI Monitoring service to help debug the issue.

Correct Answer: D

**QUESTION 5**

One of your development teams has asked for your help to standardize the creation of several compute instances that must be provisioned each day of the week. You initially write several Command Line Interface (CLI) commands with all appropriate configuration parameters to achieve this task later determining this method lacks flexibility.

Which command generates a JSON-based template that Oracle Cloud Infrastructure (OCI) CLI can use to provision these instances on a regular basis? (Choose the best answer.)

- A. `oci compute instance create --generate-cli-skeleton`
- B. `oci compute instance launch --generate-cli-skeleton`
- C. `oci compute provision-instance --generate-full-command-json-input`
- D. `oci compute instance launch --generate-full-command-json-input`

Correct Answer: D
