100% Passing Guarantee  
100% Money Back Assurance

Following Questions and Answers are all new published by Oracle  
Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

### QUESTION 1

Your application is using an Object Storage bucket named app-data in the namespace vision, to store both persistent and temporary data. Every week all the temporary data should be deleted to limit the storage consumption.

Currently you need to navigate to the Object Storage page using the web console, select the appropriate bucket to view all the objects and delete the temporary ones.

To simplify the task you have configured the application to save all the temporary data with /temp prefix. You have also decided to use the Command Line Interface (CLI) to perform this operation.

What is the command you should use to speed up the data cleanup? (Choose the best answer.)

- A. `oci os object delete -ns vision -bn app-data --prefix /temp`
- B. `oci os object bulk-delete -ns vision -bn app-data --prefix /temp --force`
- C. `oci objectstorage bulk-delete -ns vision -bn app-data --prefix /temp --force`
- D. `oci os object delete app-data in vision where prefix = /temp`

Correct Answer: B

---

### QUESTION 2

You have been asked to review a network design for Oracle Cloud Infrastructure (OCI) by a major client. The client's IT team needs to provision two Virtual Cloud Networks (VCNs) for a major application. The application uses a large number of virtual machine instances. Additionally, in the future, a VCN peering will be required to allow connectivity between the VCNs.

Which of the following are valid IP ranges to consider? (Choose the best answer.)

- A. 10.0.0.0/30 and 192.168.0.0/30
- B. 10.0.0.0/8 and 11.0.0.0/8
- C. 10.0.8.0/21 and 10.0.16.0/22
- D. 10.0.0.0/16 and 10.0.64.0/24

Correct Answer: D

### QUESTION 3

You have a 750 MIB file in an Oracle Cloud Infrastructure (OCI) Object Storage bucket. You want to download the file in multiple parts to speed up the download using the OCI CLI. You also want to configure each part size to be 128 MIB.

Which is the correct OCI CLI command for this operation? (Choose the best answer.)

- A. `oci os object get -ns my-namespace -bn my-bucket --name my-large-object --multipart-download-threshold 750 --parallel-download-count 128`
- B. `oci os object download -ns my-namespace -bn my-bucket --name my-large-object --multipart-download-threshold 750 --parallel-download-count 128`
- C. `oci os object download -ns my-namespace -bn my-bucket --name my-large-object --resume-put --multipart-download-threshold 500 --part-size 128`
- D. `oci os object get -ns my-namespace -bn my-bucket --name my-large-object --multipart-download-threshold 500 --part-size 128`

Correct Answer: D

#### QUESTION 4

You launched a Linux compute instance to host the new version of your company website via Apache Httpd server on HTTPS (port 443). The instance is created in a public subnet along with other instances. The default security list associated to the subnet is:

Ingress					Egress				
CIDR	IP Protocol	Source Port	Destination Port	State	CIDR	IP Protocol	Source Port	Destination Port	State
0.0.0.0/0	TCP	All	22	Stateful	0.0.0.0/0	All			Stateful
0.0.0.0/0	ICMP			Stateful					

You want to allow access to the company website from public internet without exposing websites eventually hosted on the other instances in the public subnet.

Which action would you take to accomplish the task? (Choose the best answer.)

- A. Create a network security group, add a stateful rule to allow ingress access on port 443 and associate it to the public subnet that hosts the company website.
- B. In default security list, add a stateful rule to allow ingress access on port 443.
- C. Create a new security list with a stateful rule to allow ingress access on port 443 and associate it to the public subnet.
- D. Create a network security group, add a stateful rule to allow ingress access on port 443 and associate it to the instance that hosts the company website.

Correct Answer: D

#### QUESTION 5

Your deployment platform within Oracle Cloud Infrastructure (OCI) leverages a compute instance with multiple block volumes attached. There are multiple teams that use the same compute instance and have access to these block volumes. You want to ensure that no one accidentally deletes any of these block volumes. You have started to construct the following IAM policy but need to determine which permissions should be used.

```
allow group DeploymentUsers to manage volume-family where ANY { request.permission != , request.permission != , request.permission != }
```

Which permissions can you use in place of in this policy? (Choose the best answer.)

- A. VOLUME\_DELETE, VOLUME\_ATTACHMENT\_DELETE, VOLUME\_BACKUP\_DELETE
- B. VOLUME\_ERASE, VOLUME\_ATTACHMENT\_ERASE, VOLUME\_BACKUP\_ERASE
- C. ERASE\_VOLUME, ERASE\_VOLUME\_ATTACHMENT, ERASE\_VOLUME\_BACKUP
- D. DELETE\_VOLUME, DELETE\_VOLUME\_ATTACHMENT, DELETE\_VOLUME\_BACKUP

Correct Answer: A
