**QUESTION 1**

You have recently been asked to take over management of your company's infrastructure provisioning efforts, utilizing Terraform v0.12 to provision and manage infrastructure resources in Oracle Cloud Infrastructure (OCI). For the past few days the development environments have been failing to provision. Terraform returns the following error: You locate the related code block in the Terraform config and find the following:

```
Error: Missing item separator
```

```
on vcn_peer_lab.tf line 15, in resource "oci_core_security_list" "ManagementSecurityList":
15:   tcp_options = [min = "22", max = "22"]
```

```
Expected a comma to mark the beginning of the next item.
```

```
(11) ingress_security_rules {
(12)     protocol = 6
(13)     source = "0.0.0.0/0"
(14)
(15)     tcp_options = [min = "22", max = "22"]
(16) }
```

Which correction should you make to solve this issue? (Choose the best answer.)

- A. Place a command at the end of line 16
- B. Modify line 15 to be the following: `tcp_options = {min = "22", max = "22"}`
- C. Modify line 15 to be the following: `tcp_options { min = "22" max = "22" }`
- D. Replace the curly braces '{ }' in lines 11 and 16 with square braces '[]'

Correct Answer: B

QUESTION 2

A subscriber of an Oracle Cloud Infrastructure (OCI) Notifications service topic complained about not receiving messages from the service.

Which option can help you debug this issue? (Choose the best answer.)

- A. If OCI Notifications service does not receive an acknowledgement from a subscription endpoint, the service drops the message. Confirm that the subscriber is always online to receive messages to help debug the issue.
- B. If OCI Notifications service does not receive an acknowledgement from a subscription endpoint, check the `NumberOfNotificationFailed` metric through the OCI Monitoring service for failed messages. Copy these messages to an OCI Object Storage bucket. Make sure the subscriber has the required credentials to access this bucket to help debug the issue.

C. If OCI Notifications service does not receive an acknowledgement from a subscription endpoint, the service tries to redeliver messages for up to one day. Make sure that the subscriber is online at least once a day to help debug the issue.

D. If OCI Notifications service does not receive an acknowledgement from a subscription endpoint, the service tries to redeliver messages for up to two hours. Configure an alarm on the NumberOfNotificationFailed metric through the OCI Monitoring service to help debug the issue.

Correct Answer: D

QUESTION 3

You have received an email from your manager to provision new resources on Oracle Cloud Infrastructure (OCI). When researching OCI, you determined that you should use OCI Resource Manager. Since this is a task that will be done multiple times for development, test, and production. You will need to create a command that can be re-used.

Which CLI command can be used in this situation? (Choose the best answer.)

A. `oci resource-manager stack create --tenancy-id \ --config-source prod.zip --variables file://variables.json \ --display-name Production stack build \ --description Creating new Production environment`

B. `oci resource-manager stack update --compartment-id \ --config-source prod.zip --variables file://variables.json \ --display-name "Production stack build" \ --description Creating new Production environment`

C. `oci resource-manager stack create --compartment-id \ --config-source prod.zip --variables file://variables.json \ --display-name Production stack build \ --description Creating new Production environment`

D. `oci resource-manager stack update --tenancy-id \ --config-source prod.zip --variables file://variables.json \ --display-name "Production stack build" \ --description Creating new Production environment`

Correct Answer: C

QUESTION 4

You are launching a Windows server in your Oracle Cloud Infrastructure (OCI) tenancy. You provided a startup script during instance initialization, but it was not executed successfully.

What is a possible reason for this error? (Choose the best answer.)

A. Didn't include anything in `user_data`.

B. Wrote a custom script which tried to install GPU drivers.

C. Ran a `cloudbase-init` script instead of `cloud-init`.

D. Specified a `#directive` on the first line of your script.

Correct Answer: C

QUESTION 5

You are using the Oracle Cloud Infrastructure Command Line Interface to launch a Linux virtual machine. You enter the following command (with correct values for all parameters): The command fails.

```
oci compute instance launch --availability-domain
"<availability_domain_name>" -t <tenancy_id> -c <compartment_id>
--shape "<shape_name>" --display-name "<instance_display_name>"
--image-id <image_id> --ssh-authorized-keys-file
"<path_to_authorized_keys_file>" --subnet-id <subnet_id>
```

Which is NOT a valid parameter in this command? (Choose the best answer.)

- A. -t
- B. --image-id
- C. --shape "<shape_name>"
- D. -c
- E. --subnet-id

Correct Answer: A
