QUESTION 1

In a validation loop, users are repeatedly asked to enter the same information, thereby preventing them from transitioning to a different dialog flow state in a conversation.

What is causing the validation loop?

- A. The dialog flow state uses an input component that references a nonentity type variable. The same dialog flow state is referenced in the next transition.
- B. The nlpResultvariable property of the input component points to "iResult", which is a variable of type "nlpresult".
- C. The keepTurn property of the input component is set to true and the maxPrompts property is set to a value greater than 0.
- D. The input component associated with a state references a variable of an entity type and the maxPrompts property is not set.

Correct Answer: C

QUESTION 2

Which is NOT used to tune routing behavior?

- A. the classifier's F1-score
- B. the built-in system intent confidence threshold
- C. the confidence win margin
- D. candidate skills' confidence thresholds

Correct Answer: A

QUESTION 3

Which two statements are true for the system.webview component?

- A. Parameters passed from the skill to the web application cannot be accessed through JavaScript.
- B. Property names in the web application response payload must match with the variable names in the dialog flow.
- C. When registering web applications in a skill, bot designers can see the data structure returned by the app
- D. Parameters passed from the skill to the web application are accessible through JavaScript.
- E. The webview.onDone parameter is automatically added to the payload and passes the skill's callback URL property to the web application.

Correct Answer: AD

QUESTION 4

What is the error message ````Your session appears to be in an infinite loop```` usually caused by?

- A. a missing `keepTurn = true` entry in the dialog flow
- B. a component in a dialog flow state that references a variable that has a value set while the dialog flow state continues to transition
- C. a problem with the Digital Assistant tenant
- D. a problem with a custom component that is referenced in your dialog flow

Correct Answer: C

QUESTION 5

You have a skill for ordering pizzas. In your experience, you have found that 95% of your customers want a regular crust and just 5% prefer gluten-free crust. Because so few people are likely to want a gluten-free crust, you don't want to prompt for that option, but you do want to make it available. Assuming you already have a composite bag entity that contains a `PizzaCrust` entity that has the values "regular" and "gluten free", what would be the simplest way to have your skill enable a user to order a pizza with a gluten-free crust without the skill prompting the user for that option?

- A. Don't set a prompt for the `PizzaCrust` entity item.
- B. For the `PizzaCrust` entity item, set the `Extract With` property to reference an entity with the single value "gluten free".
- C. In the composite bag, set the `PizzaCrust` entity item's `Prompt for Value` property to `False`. Then, once the the composite bag is resolved, check if the `PizzaCrust` entity has a value. If it doesn't, set its value to "regular".
- D. Don't set a prompt for the `PizzaCrust` entity item and set the `Out of Order Extraction` property to `True`.

Correct Answer: A
