Overview of Data Transfer Service

Oracle offers offline data transfer solutions that let you migrate data to Oracle Cloud Infrastructure. Moving data over the public internet is not always feasible due to high network costs, unreliable network connectivity, long transfer times, and security concerns. Our transfer solutions address these pain points, are easy to use, and provide significantly faster data upload compared to over-the-wire data transfer.

- A. The batch job depends on only one table and parallelism cannot be enabled on single-table queries.
- B. The parallelism of batch job depends on the number of ADW databases involved in the query.
- C. The new batch job is connected to LOW consumer group.
- D. The new batch job runs on database tables that are not enable for parallel execution.
- E. Parallelism on the database is controlled by the application, not the database.
