-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

Which service would you use if your big data workload required shared access and NFS-based connectivity?

- A. block volume
- B. archive storage
- C. object storage
- D. file storage

Correct Answer: D

QUESTION 2

Which two Oracle Cloud Infrastructure database services allow you to dynamically both scale CPU and storage? (Choose two.)

- A. bare metal DB system
- B. virtual machine DB system
- C. Autonomous Data Warehouse (ADW)
- D. Autonomous Transaction Processing (ATP)

Correct Answer: CD

If a bare metal DB system requires more compute node processing power, you can scale up (increase) the number of enabled CPU cores in the system without impacting the availability of that system but you can't increase the storage. If the original DB system VM shape uses a single node, running databases on the DB system nodes are sequentially stopped and then restarted on the new shape so not dynamic

QUESTION 3

Which two statements are true about Autonomous Data Warehouse (ADW) backup?

- A. You can perform manual backups to OCI object storage in addition to automated backups available on ADW
- B. You can backup ADW database only to a standard bucket type in OCI object storage
- C. Oracle Cloud Infrastructure (OCI) recommends backing up ADW databases manually to on- premises storage devices
- D. You must backup ADW database to object storage bucket named ADW_backup

Correct Answer: AB

Autonomous Database automatically backs up your database for you. In addition to automatic backups Autonomous Database also allows you take manual backups to your Oracle Cloud Infrastructure Object Storage. for example if you

want

to take a backup before a major change to make restore and recovery faster.

Also, Manual backups are only supported with buckets created in the standard storage tier if you provision an Autonomous Data Warehouse instance named ADWC1, the bucket name should be backup_adwc1 (the bucket name is

lowercase)

QUESTION 4

Which option is NOT a valid action within the Oracle Cloud Infrastructure (OCI) Block Volume service?

- A. Clone an existing volume to a new, larger volume.
- B. Restore from a volume backup to a larger volume.
- C. Shrink an existing volume in place with offline resizing.
- D. Expand an existing volume in place with offline resizing.

Correct Answer: C

QUESTION 5

You are a network architect and have designed the network infrastructure of a three-tier application on Oracle Cloud Infrastructure (OCI). In the architecture, back-end DB servers are in a private subnet. One of your DB administrators

requests to have access to OCI object storage service.

How can you meet this requirement?

- A. Add a new route rule to the private subnet route table to route default traffic to the internet gateway.
- B. Attach a public IP address to the instances in the private subnet, and then add a new route rule to the private subnet route table to route default traffic to the internet gateway.
- C. Create a dynamic routing gateway (DRG) and attach it to your virtual cloud network (VCN). Add a default route rule to the private subnets route table and set the target as DRG.
- D. Create a service gateway, add a new route rule to the private subnet route table that uses object storage as target type.

Correct Answer: D

A service gateway lets resources in your VCN privately access specific Oracle services, without exposing the data to an internet gateway or NAT. The resources in the VCN can be in a private subnet and use only private IP addresses. The

traffic from the VCN to the service of interest travels over the Oracle network fabric and never traverses the internet. To give your VCN access to a given service CIDR label, you must enable that service CIDR label for the VCN's service

gateway. You can do that when you create the service gateway, or later after it's created. You can also disable a

service CIDR label for the service gateway at any time. For traffic to be routed from a subnet in your VCN to a service gateway,

you must add a rule accordingly to the subnet's route table. The rule must use the service gateway as the target.
