### QUESTION 1

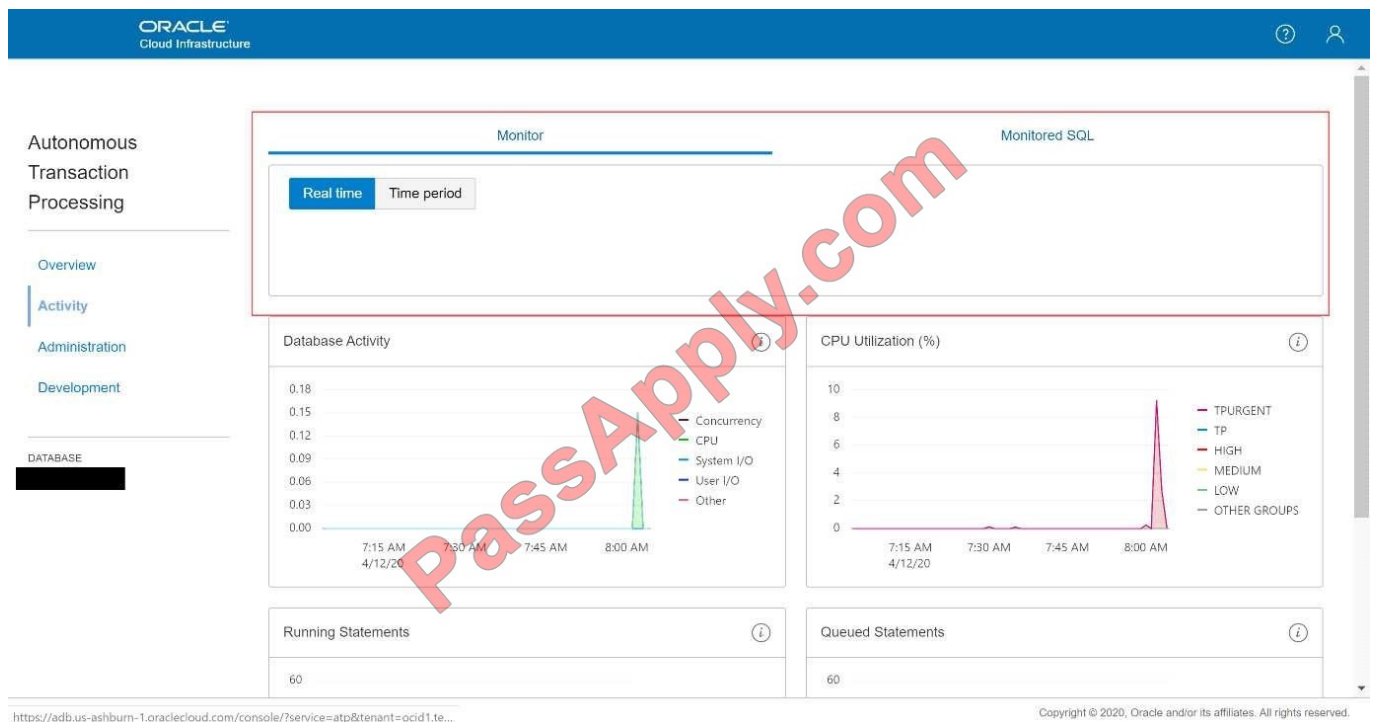

What is the default backup location for database backup on Database Cloud Service (DBCS)?

- A. Object Storage on Oracle Cloud Infrastructure
- B. ASM diskgroup
- C. block volume
- D. locally attached NVMe on Virtual Machine

Correct Answer: A

References: <https://docs.oracle.com/en/cloud/paas/database-dbaas-cloud/csdbi/backing.html>

### QUESTION 2

Which of the following two tasks can be performed in the Oracle Cloud Infrastructure Console for Autonomous Data Warehouse?

- A. Adjust Network Bandwidth
- B. Scale up/down Memory
- C. Increase Storage allocated for Database
- D. Scale up/down CPU

Correct Answer: CD

You can scale up/down your Autonomous Database to scale both in terms of compute (CPU) and storage only when needed, allows people to pay per use. Oracle allows you to scale compute and storage independently, no need to do it together. these scaling activities fully online (no downtime required) in Details page Autonomous Database in OCI console, click Scale Up/Down. Click on arrow to select a value for CPU Core Count or Storage (TB).

Or Select auto scaling to allow the system to automatically use up to three times more CPU and IO resources to meet workload demand, compared to the database operating with auto scaling disabled.

### QUESTION 3

You are planning to deploy a multi-region web application in Oracle Cloud Infrastructure (OCI). You have customers in North America, Asia and Europe who will access the application. What service is available in OCI to help you choose the regions the lowest latency to these markets?

- A. Internet Intelligence
- B. FastConnect

- C. IPsec VPN
- D. DNS Zone Management

Correct Answer: A

---

#### QUESTION 4

Which two statements define the types of DNS resolvers that exist? (Choose two.)

- A. A custom resolver allows instances to use the host names of the hosts in your on-prem network that are connected to your VCN by an IPsec VPN connection.
- B. A VCN resolver allows instances to use the host names of the hosts in your on-prem network that are connected to your VCN by an IPsec VPN connection.
- C. A VCN resolver allows instances to use host names to communicate with instances on other VCNs in your tenancy.
- D. An Internet resolver allows instances to use the host names that are published on the Internet.

Correct Answer: AD

<https://docs.cloud.oracle.com/iaas/Content/Network/Concepts/dns.htm> This is an Oracle-provided option that includes two parts: Internet Resolver: Lets instances resolve hostnames that are publicly published on the internet. The instances do not need to have internet access by way of either an internet gateway or a connection to your on-premises network (such as an IPsec VPN connection through a DRG ). VCN Resolver: Lets instances resolve hostnames (which you can assign) of other instances in the same VCN. For more information, see About the DNS Domains and Hostnames. By default, new VCNs you create use the Internet and VCN Resolver. If you're using the Networking API, this choice refers to the VcnLocalPlusInternet enum in the DhcpDnsOption object. The Internet and VCN Resolver does not let instances resolve the hostnames of hosts in your on- premises network connected to your VCN by IPsec VPN connection or FastConnect. Use your own custom DNS resolver to enable that.

<https://docs.cloud.oracle.com/iaas/Content/Network/Concepts/dns.htm?Highlight=DNS%20resolve%20r#About>

---

#### QUESTION 5

You are running several Linux based operating systems in your on .premises environment that you want to import to OCI as custom images. You can launch your imported images as OCI compute Virtual machines. Which two modes below can be used to launch these imported Linux VMs?

- A. Native
- B. Mixed
- C. Paravirtualized
- D. Emulated

Correct Answer: CD

You can use the Console or API to import exported images from Object Storage. To import an image, you need read access to the Object Storage object containing the image.

during the Import you can select the Launch mode:

For custom images where the image format is .oci, Oracle Cloud Infrastructure selects the applicable launch mode based on the launch mode for the source image. For custom images exported from Oracle Cloud Infrastructure where the

image type is QCOW2, select Native Mode.

To import other custom images select Paravirtualized Mode or Emulated Mode. For more information, see Bring Your Own Image (BYOI).

These Linux distributions support custom image import:

Linux Distribution	Supported Versions	Preferred Launch Mode
CentOS	7 or later	Paravirtualized
	4.0, 4.8, 5.11, 6.9	Emulated
CoreOS Container Linux <b>Note:</b> The end-of-support date for CoreOS Container Linux is May 26, 2020. You should migrate your workloads to another operating system to remain secure.	2345.3.0 or later	Paravirtualized
Debian	8 or later	Paravirtualized
	5.0, 10, 5.0, 7	Emulated
FreeBSD	12 or later	Paravirtualized
	8, 9, 10, 11	Emulated
openSUSE Leap	15.1	Paravirtualized
Oracle Linux	7 or later	Paravirtualized
	4.5, 4.8, 5.8, 5.11, 6.2, 6.5	Emulated
RHEL	7 or later	Paravirtualized
	4.5, 5.5, 5.6, 5.9, 5.11, 6.5, 6.9	Emulated
SUSE	12.2 or later	Paravirtualized
	11, 12.1	Emulated
Ubuntu	13.04 or later	Paravirtualized
	12.04	Emulated
