QUESTION 1

Which two statements are true about data guard service on DB Systems in Oracle Cloud Infrastructure (OCI)? (Choose two.)

- A. Data guard implementation requires two DB Systems, one running the primary database on a virtual machine and the standby database running on bare metal
- B. Data guard configuration on the OCI is limited to one standby database per primary database
- C. Data guard configuration on the OCI is limited to a virtual machine only
- D. Data guard implementation requires two DB Systems, one containing the primary database and one containing the standby database

Correct Answer: BD

QUESTION 2

Which two are required parameters to create a public load balancer instance? (Choose two.)

- A. certificate
- B. load balancer name
- C. listener
- D. back end set
- E. two public subnets

Correct Answer: CD

QUESTION 3

A company currently uses Microsoft Active Directory as its identity provider. The company recently subscribed to Oracle Cloud Infrastructure (OCI) to leverage the cloud platform for test and development. As the administrator, you configured the OCI tenancy to be federated with Microsoft Active Directory. Now you need to give access to developers so that they can start creating resources in their OCI accounts. Which step will you perform to make sure you are not duplicating user creation inside of OCI tenancy?

- A. Create a group for developers on OCI and map the group to a similar group in Microsoft Active Directory during the federation process.
- B. Create a new user account in OCI for each user, and then create policies to provide access to developers.
- C. Create a group for developers on OCI, export all the developers from Microsoft Active Directory, and then import them into the Identity and Access Management (IAM) group.

D. Create a single user account in OCI, and then create policies to provide access to developers to this single account.

Correct Answer: A

When working with your IdP, your administrator defines groups and assigns each user to one or more groups according to the type of access the user needs. Oracle Cloud Infrastructure also uses the concept of groups (in conjunction with IAM policies) to define the type of access a user has. As part of setting up the relationship with the IdP, your administrator can map each IdP group to a similarly defined IAM group, so that your company can re-use the IdP group definitions when authorizing user access to Oracle Cloud Infrastructure resources.

QUESTION 4

Your company uses the Oracle Cloud Infrastructure (OCI) Object Storage service to share large data sets with its data science team. The data science team consists of 20 people who work from offices in Washington, D.C., and Tokyo. While working in these offices, employees are assigned an IP address from the public IP range 129.146.31.0/27 Which two steps should you take to ensure that the Object Storage bucket used in this scenario was only accessible from these office locations? (Choose two.)

- A. Write an IAM policy that includes the conditional statement where `request.networkSource.name = CorpNet`
- B. Set the bucket visibility to public and only share the URL with the data science team via email
- C. Create a pre-authenticated request for each data set and only share with the data science team via email
- D. Create a Network Source named CorpNetwork with a CIDR block of 129.146.31.0/27
- E. Create a Network Source named CorpNetwork with a CIDR block of 129.146.0.0/16
- F. Write an IAM policy that includes the conditional statement where `request.region = 129.146.31.0/27`

Correct Answer: CE

QUESTION 5

You have an Oracle Cloud Infrastructure (OCI) load balancer distributing traffic via an evenly- weighted round robin policy to your back-end web servers. You notice that one of your web servers is receiving more traffic than other web servers.

How can you resolve this to make sure traffic is evenly distributed across all back-end web servers?

- A. Disable cookie-based session persistence on your backend set.
- B. Change kee
- C. Disable SSL configuration associated with your backend set.
- D. Create separate listeners for each backend web server.

Correct Answer: D
