- ⚙️ **365 Days** Free Update
- ⚙️ **800,000+** Satisfied Customers

QUESTION 1

Which feature allows you to logically group and isolate your Oracle Cloud Infrastructure resources?

- A. Tenancy
- B. Identity and Access Management Groups
- C. Compartments
- D. Availability Domain

Correct Answer: C

COMPARTMENT A collection of related resources. Compartments are a fundamental component of Oracle Cloud Infrastructure for organizing and isolating your cloud resources. You use them to clearly separate resources for the purposes of measuring usage and billing, access (through the use of policies), and isolation (separating the resources for one project or business unit from another).

A common approach is to create a compartment for each major part of your organization.

User Group can use some resources in the compartment like network resources also they can't create it depend on the policy that assigned Remember, a compartment is a logical grouping, not a physical one

QUESTION 2

Which CANNOT be used with My Oracle Support (MOS)?

- A. Add or change a tenancy administrator
- B. Request a Service Limit increase
- C. Reset the password or unlock the account for the tenancy administrator
- D. Troubleshoot your resources in an Oracle Cloud Infrastructure Free Trial account

Correct Answer: D

Open a support service request with MOS option is available to paid accounts. Customers using only Always Free resources are not eligible for Oracle Support. Limited support is available to Free Tier accounts with Free Trial credits. After you use all of your credits or after your trial period ends (whichever comes first), you must upgrade to a paid account to access Oracle Support. If you choose not to upgrade and continue to use Always Free Services, you will not be eligible to raise a service request in My Oracle Support. In addition to support for technical issues, use My Oracle Support if you need to:

1.

Reset the password or unlock the account for the tenancy administrator

2.

Add or change a tenancy administrator

3.

Request a service limit increase

QUESTION 3

What does compute instance vertical scaling mean?

- A. Providing Fault tolerance
- B. Adding additional compute instances
- C. Enabling Disaster recovery
- D. Changing to a large or smaller shape

Correct Answer: D

Changing the Shape of an Instance (Horizontal Scaling)

You can change the shape of a virtual machine (VM) instance without having to rebuild your instances or redeploy your applications. This lets you scale up your Compute resources for increased performance, or scale down to reduce cost. Autoscaling (vertical scaling) Autoscaling lets you automatically adjust the number of Compute instances in an instance pool based on performance metrics such as CPU utilization. This helps you provide consistent performance for your end users during periods of high demand, and helps you reduce your costs during periods of low demand. As load increases, instances are automatically provisioned: the instance pool scales out. As load decreases, instances are automatically removed: the instance pool scales in.

**Vertical Scaling****Horizontal Scaling**

QUESTION 4

Which three methods can you use to create or modify Oracle Cloud Infrastructure (OCI) resources?

- A. REST APIs
- B. OCI desktop client
- C. Secure Shell (SSH)
- D. OCI Console
- E. Command-line Interface
- F. Remote Desktop Protocol (RDP)

G. Serial console connection

Correct Answer: ADE

You can create and manage resources in the following ways: Oracle Cloud Infrastructure Console The Console is an intuitive, graphical interface that lets you create and manage your instances, cloud networks, and storage volumes, as well as your users and permissions. See Using the Console. Oracle Cloud Infrastructure APIs The Oracle Cloud Infrastructure APIs are typical REST APIs that use HTTPS requests and responses. See API Requests. SDKs Several Software Development Kits are available for easy integration with the Oracle Cloud Infrastructure APIs, including SDKs for Java, Ruby, and Python. For more information, see Developer Resources. Command Line Interface (CLI) You can use a command line interface with some services. For more information, see Developer Resources. Terraform Oracle supports Terraform. Terraform is "infrastructure-as-code" software that allows you to define your infrastructure resources in files that you can persist, version, and share. For more information, see Getting Started with the Terraform Provider. Ansible Oracle supports the use of Ansible for cloud infrastructure provisioning, orchestration, and configuration management. Ansible allows you to automate configuring and provisioning your cloud infrastructure, deploying and updating software assets, and orchestrating your complex operational processes. For more information, see Getting Started with Ansible for Oracle Cloud Infrastructure. Resource Manager Resource Manager is an Oracle Cloud Infrastructure service that allows you to automate the process of provisioning your Oracle Cloud Infrastructure resources. It helps you install, configure, and manage resources using the "infrastructure-as-code" model. For more information, see Overview of Resource Manager.

QUESTION 5

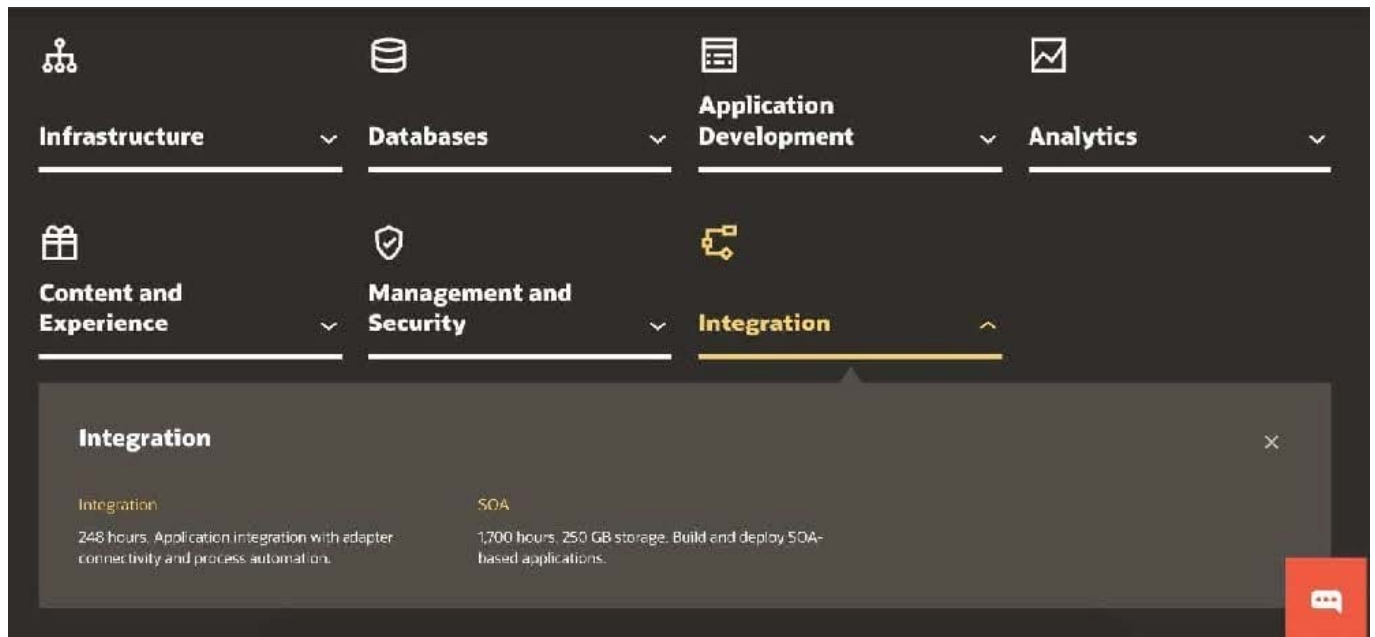

Which is NOT part of the Oracle Cloud Always Free eligible resources that you can provision in your tenancy?

- A. Fast Connect (1 Gbps public peering)
- B. Autonomous Database (up to two database instances)
- C. Block Volume (up to 100 GB total storage)
- D. Load Balancing (one load balancer)

Correct Answer: A

For more information on Always Free Resources refer below official documentation page <https://docs.cloud.oracle.com/en-us/iaas/Content/FreeTier/resourceref.htm?Highlight=%20Always%20free> OCI FastConnect is not offered

as part of the Free tier:
