100% Passing Guarantee  
100% Money Back Assurance

Following Questions and Answers are all new published by Oracle  
Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

## QUESTION 1

What would you use to make Oracle Cloud Infrastructure Identity and Access Management govern resources in a tenancy?

- A. Policies
- B. Users
- C. Dynamic groups
- D. Groups

Correct Answer: A

**POLICY** A document that specifies who can access which resources, and how. Access is granted at the group and compartment level, which means you can write a policy that gives a group a specific type of access within a specific compartment, or to the tenancy itself. If you give a group access to the tenancy, the group automatically gets the same type of access to all the compartments inside the tenancy. For more information, see Example Scenario and How Policies Work. The word "policy" is used by people in different ways: to mean an individual statement written in the policy language; to mean a collection of statements in a single, named "policy" document (which has an Oracle Cloud ID (OCID) assigned to it); and to mean the overall body of policies your organization uses to control access to resources.

## QUESTION 2

### Security Advisor

Security Advisor helps you create cloud resources that align with Oracle's security principles and best practices. It also ensures that your resources meet the requirements enforced by security zone policies. For example, you can quickly create resources that are encrypted with a customer-managed master encryption key using the Vault service.

For example, you can use Security Advisor to create the following resources:

- Object Storage bucket ⓘ
- File Storage file system ⓘ
- Compute instance (Compute) ⓘ (and associated boot volume)
- Block Volume block storage volume ⓘ

Which OCI service can index, enrich, aggregate, explore, search, analyze, correlate, visualize and monitor data?

- A. Data Guard
- B. Data Safe
- C. WAF
- D. Logging Analytics

Correct Answer: D

## About Logging Analytics

Oracle Cloud Logging Analytics is a cloud solution in Oracle Cloud Infrastructure that lets you index, enrich, aggregate, explore, search, analyze, correlate, visualize and monitor all log data from your applications and system infrastructure on cloud or on-premises.

---

### QUESTION 3

Which is NOT a part of Observability and Management Services?

- A. Event Services
- B. OCI Management Service
- C. Logging Analytics
- D. Logging

Correct Answer: B

---

### QUESTION 4

You have configured the Management Agent on an Oracle Cloud Infrastructure (OCI) Linux instance for log ingestion purposes.

Which is a required configuration for OCI Logging Analytics service to collect data from multiple logs of this Instance?

- A. Log - Log Group Association
- B. Entity - Log Association
- C. Source - Entity Association
- D. Log Group - Source Association

Correct Answer: C

---

### QUESTION 5

Which WAF service component must be configured to allow, block, or log network requests when they meet specified criteria?

- A. Protection rules
- B. Bot Management

C. Origin

D. Web Application Firewall policy

Correct Answer: A

Protection rules

Protection rules can be configured to either allow, block, or log network requests when they meet the specified criteria of a protection rule. The WAF will observe traffic to your web application over time and suggest new rules to apply.
