QUESTION 1

You create a new compartment, "apps," to host some production apps and you create an apps_group and added users to it. What would you do to ensure the users have access to the apps compartment?

- A. Add an IAM policy for the individual users to access the apps compartment.
- B. Add an IAM policy for apps_group granting access to the apps compartment.
- C. Add an IAM policy to attach tenancy to the apps group.
- D. No action is required.

Correct Answer: B

QUESTION 2

Oracle Object Storage achieves data durability by which of the mechanisms ? Select TWO correct answers

- A. Service Gateway
- B. Redundant Storage across availability domains
- C. Redundant Array of IndependentDisks
- D. Object Versioning

Correct Answer: BD

How durable is data stored in Oracle Cloud Infrastructure Object Storage?

Oracle Object Storage is designed to be highly durable, providing 99.999999999% (Eleven 9's) of annual durability. It achieves this by storing each object redundantly across three servers in different availability domains for regions with multiple availability domains, and in different fault domains in regions with a single availability domain. Existing objects can be accessed as long as one of the three copies is accessible, and new objects can be uploaded as long as two copies can be successfully written. Data integrity is actively monitored using checksums, and corrupt data is detected and automatically repaired. Any loss in data redundancy is detected and remedied, without customer intervention or impact.

QUESTION 3

Which statement about Oracle Cloud Infrastructure Multi-Factor Authentication (MFA) is NOT valid?

- A. Users cannot disable MFA for themselves.
- B. A user can register only one device to use for MFA.
- C. Users must install a supported authenticator app on the mobile device they intend to register for MFA.
- D. An administrator can disable MFA for another user.

Correct Answer: A

QUESTION 4

A company has OCI tenancy which has mount target associated with two File Systems, CG_1 and CG_2. These FileSystems are accessed by IP-based clients AB_1 and AB_2 respectively. As a security administrator, how can you provide access to both clients such that CGI has Read only access on AB1 and CG_2 has Read/Write access on AB_2?

- A. NFS Export Option
- B. Access Control Lists
- C. NFS v3 Unix Security
- D. Vault

Correct Answer: AC

The **NFS export option layer** is a method of applying access control per-file system export based on source IP address that bridges the Network Security layer and the NFS v.3 Unix Security layer.

The **NFS v.3 Unix security layer** controls what users can do on the instance, such as installing applications, creating directories, mounting external file systems by a local mount point, and reading and writing files.

QUESTION 5

Which OCI services can encrypt all data-at-rest ? Select TWO correct answers

- A. File Storage
- B. NAT Gateway
- C. Block Volumes
- D. Geolocation Steering

Correct Answer: AC
