-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

The administration server is a major component of a WebLogic domain. I need to make available a standby administration server in case the main administration server in the domain crashes.

Which utility will help me in doing this? (Choose the best answer.)

- A. Configuration Wizard
- B. Domain Template Builder
- C. pack/unpack
- D. Enterprise Manager

Correct Answer: D

Reference: http://docs.oracle.com/cd/E24628_01/install.121/e24089/appdx_standby_oms.htm#EMADV13364

QUESTION 2

You are using the administration console to monitor messages in a queue.

Which three tasks can be performed while doing this monitoring? (Choose three.)

- A. Create a new message in the queue.
- B. Duplicate a message.
- C. Monitor the content of a message.
- D. Delete the message from the queue.
- E. Merge two messages.
- F. Alter the ordering of the messages.

Correct Answer: CDF

QUESTION 3

You are reviewing the scheduled maintenance of your domain after adding a new cluster.

Which statement is true when configuring a migratable target within a WebLogic Server cluster? (Choose the best answer.)

- A. Allow Post-Migration Script To Run On a Different Machine is selected by default.
- B. The default server migration policy is Auto-Migrate Exactly-once Services.
- C. The participating cluster should include at least one configured server.

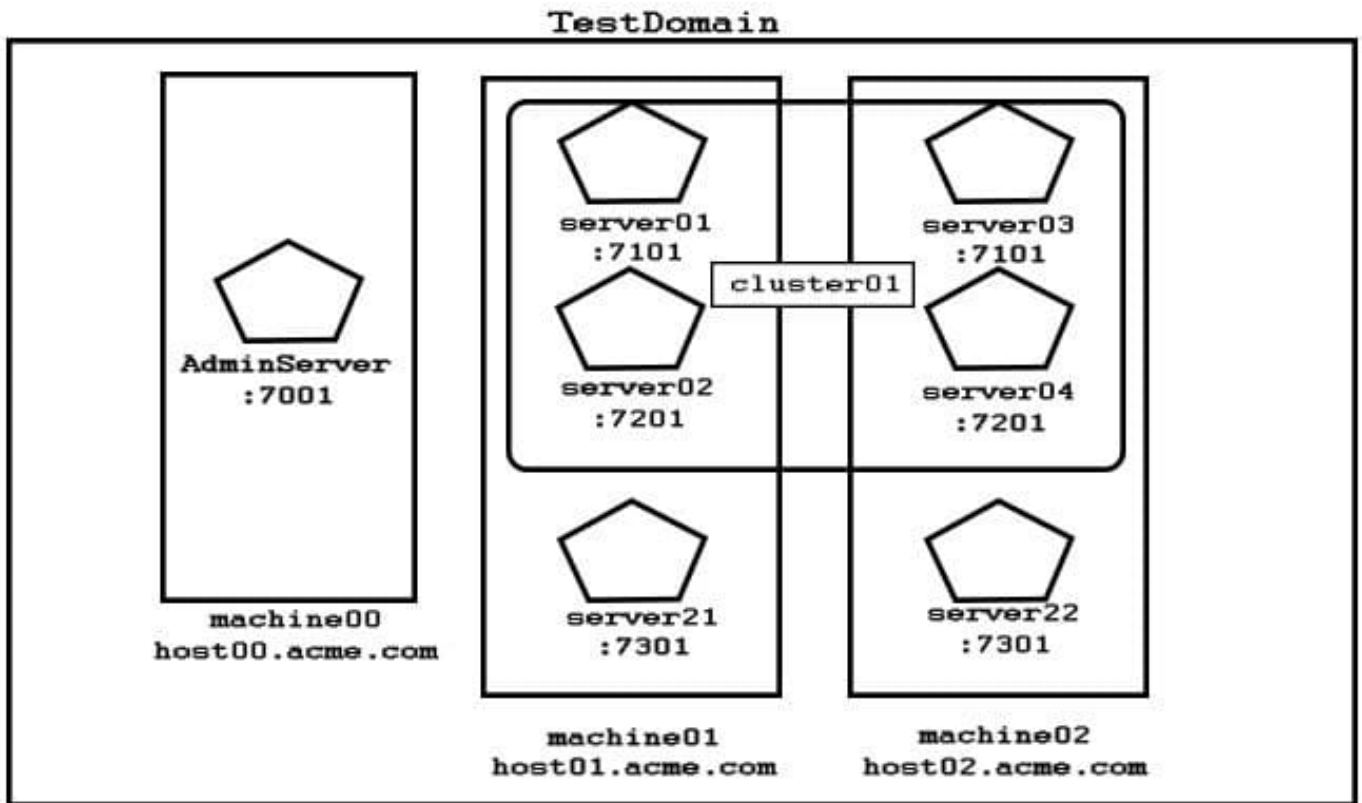

D. An automatically migrated service will always be hosted on the specified User Preferred Server.

Correct Answer: D

QUESTION 4

Examine the domain diagram:

Assume all servers are running and you have an online WLST session connected to the administration server.

Select two code options that would set the variable x as a reference to the machine02 configuration MBean. (Choose two.)

- A. `cd('/Machines/machine02\\') x = cmo`
- B. `x = getMBean("/Machines/machine02")`
- C. `x = cmo.getRef('/Machines/machine02\\')`
- D. `getRef("/Machines/machine02") x = cmo.currentObj()`
- E. `cmo.getMBean('/Machines/machine02\\') x = cmo.currObj()`
- F. `cd('/Machines/machine02\\') x = getRef(cmo)`
- G. `x = getConfiguration('/Machines/machine02\\')`

Correct Answer: AB

A: WLST online provides a variable, cmo, that represents the current management object. Example:
wls:/mydomain/serverConfig/Servers/myserver/Log/myserver> cmo
[MBeanServerInvocationHandler]mydomain:Name=myserver,Server=myserver,Type=Log

B: wls:/mydomain/edit !> bean=getMBean(\\Servers/myserver/WebServer/myserver\\) wls:/mydomain/edit !> print bean
[MBeanServerInvocationHandler]mydomain:Name=myserver,Type=WebServer,Server=myserver

QUESTION 5

In order to increase scalability and high availability you are configuring WebLogic clustering with JMS distributed destinations.

Which recommendation will ensure optimal load balancing of the message processing?

- A. The machines that host the cluster should have similar processing power, disk space, and memory.
- B. The cluster should include at least one configurable server.
- C. The cluster should use unicast communication.
- D. All servers in the cluster should be assigned to the same WebLogic machine.

Correct Answer: A

A uniform distributed destination (UDD), compared to weighted Distributed Destinations, greatly simplifies the management and development of distributed destination applications. Using uniform distributed destinations, you no longer need to create or designate destination members, but instead rely on WebLogic Server to uniformly create the necessary members on the JMS servers to which a JMS module is targeted. This feature ensures the consistent configuration of all distributed destination parameters, particularly in regards to weighting, security, persistence, paging, and quotas.

Incorrect Answers:

C: The benefits of multicasting include:

Near real-time delivery of messages to host group.

High scalability due to the reduction in the amount of resources required by the JMS server to deliver messages to topic subscribers in a cluster.

D: A distributed destination is a set of destinations (queues or topics) that are accessible as a single, logical destination to a client. A distributed destination has the following characteristics:

*

It is referenced by its own JNDI name.

*

Members of the set are usually distributed across multiple servers within a cluster, with each destination

member belonging to a separate JMS server
