QUESTION 1

Review the following WLST commands.

```
serverConfig> createSystemResourceControl('mymodule', '/u01/app/mymodule.xml',  
Target='cluster1')  
serverConfig> enableSystemResource('mymodule')
```

What happens when these commands are executed? (Choose the best answer.)

- A. A diagnostic module named mymodule is created in the domain configuration file and it is enabled on cluster1.
- B. A JMS module named mymodule is created without changing the domain configuration file and it is enabled on cluster1.
- C. A diagnostic module named mymodule is created without changing the domain configuration file and it is enabled on cluster1.
- D. A JMS module named mymodule is created in the domain configuration file and it is enabled on cluster1.

Correct Answer: C

QUESTION 2

The image below depicts a high-level diagram of configuration auditing within WebLogic Server. When Administrators make configuration changes to the WebLogic Server domain, those changes are sent to the audit provider for logging.

What task must be performed in order to make configuration audit messages in the log meaningful to an observer?

- A. Define unique users for all administrators.
- B. Configure a persistent store for log messages.
- C. Configure the CONFIG severity level.
- D. Define the audit message listener for audit messages.

Correct Answer: D

You can configure the Administration Server to emit a log message when a user changes the configuration or invokes management operations on any resource within a domain. For example, if a user disables SSL on a Managed Server in a domain, the Administration Server emits a log message. These messages provide an audit trail of changes within a domain's configuration. You can then create and use a JMX listener and filter that respond to configuration auditing

messages.

QUESTION 3

You have defined Uniform Distributed Destination (UDD) topics targeted to multiple JMS servers. Which three statements are correct about UDDs? (Choose three.)

- A. UDDs guarantee the order of messages.
- B. UDDs increase the overall availability of JMS.
- C. Weight-based load balancing policy distributes messages evenly to servers with preassigned weights.
- D. JMS destinations do not need to run on each server in a cluster.
- E. You no longer need to create or designate destination members.

Correct Answer: BDE

Reference: https://docs.oracle.com/cd/E13222_01/wls/docs103/jms/dds.html

QUESTION 4

You are designing an application that uses JMS transactions to coordinate a group of messages for production and consumption, treating messages sent or received as an atomic unit.

What are two ways you can use transactions in JMS? (Choose two.)

- A. You create a JMS-transacted session if you are using only JMS in your transactions.
- B. You set various levels of control over message acknowledgement.
- C. Use message-driven beans if consumers are nondurable.
- D. Use a JTA user-transactions in a non-transacted JMS session.

Correct Answer: AD

Reference: <https://docs.oracle.com/middleware/1212/wls/JMSPG/trans.htm#JMSPG453>

QUESTION 5

You need to log the JMSMessageID header value for incoming messages.

What is the prefix that you would see for the header values? (Choose the best answer.)

- A. VAL:
- B. JMS:

C. ID:

D. NO:

E. MSG:

Correct Answer: C
