### QUESTION 1

When you manually create a binding such as an attribute value binding, what name would you give to the binding? (Choose the best answer.)

- A. a name that reflects the UI component to which it is bound
- B. the page name suffixed with the UI component name to which it is bound
- C. the page name suffixed with the data control name
- D. the name of the data control attribute to which the binding refers
- E. an EL (Expression Language) of the form `#{bindmgs value}`

Correct Answer: B

---

### QUESTION 2

Which three statements are true about declarative features of view objects? (Choose three.)

- A. You can use view object bind variables to parameterize a view object where clause with values supplied at run time.
- B. By default, a view object instance retrieves all database rows into the view object cache.
- C. To implement master-detail behavior between two view object instances, you define an association between those instances.
- D. a view accessor defines a validation expression that you apply to a view object attribute.
- E. A view object can include attributes whose values are based on SQL expressions rather than mapping directly to a database column.
- F. A view object definition can include many view criteria but you can choose which view criteria to apply for each view object instance.

Correct Answer: ACE

---

### QUESTION 3

Which two statements are true about the Key Exists validator? (Choose two.)

- A. it always issues a select to the database to ensure all data is up to date.
- B. it first checks the cache for match and then goes to the database only if necessary.
- C. it cannot validate any data changes that happened in the current transaction that have not yet been committed to the database.
- D. it can validate any data changes that happened in the current transaction that have not yet been committed to the database.

E. it can be used only with attributes that are defined as primary keys in the database.

Correct Answer: BD

---

#### QUESTION 4

Select three benefits that ADF Data Controls provide. (Choose three.)

- A. They abstract the UI developer from the technology used to implement business logic.
- B. They reduce the need to write managed beans.
- C. They automate Ajax updates to the UI.
- D. They enable drag-and-drop of data objects to UI component bindings.
- E. They directly connect your UI to the database tables.

Correct Answer: ABD

---

#### QUESTION 5

Which three options does an entity object automatically implement? (Choose three.)

- A. primary key functionality based on any column in the database that is marked as a primary key
- B. not-null functionality based on any column in the database that is marked as not null
- C. attribute precision based on column size
- D. all table check constraints
- E. any table triggers

Correct Answer: ABC
