-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

Which option is constraint on promoting a BPMN process to be a case activity?

- A. The BPMN process has to be modeled as an asynchronous process.
- B. The BPMN process cannot contain human tasks.
- C. The BPMN process must be in the same project as the case.
- D. The BPMN process requires that the reply from the process contains at least one parameter.

Correct Answer: A

Explanation: The BPMN process must already exist. You can use synchronous and asynchronous BPMN processes. The case activity only supports message start and end points

Reference: http://docs.oracle.com/cd/E28280_01/doc.11111/e15176/case_mgmt_bpmpd.htm#BPMPD87432

QUESTION 2

Which two statements are correct about business indicators? (Choose two.)

- A. They can be captured at measurement marks.
- B. Dimensions allow the user to capture numerical values.
- C. All business indicators are captured at sampling points and a subset is captured at measurement marks.
- D. Counters are used for interval start and interval stop measurements.

Correct Answer: AC

Explanation: A Measure Business Indicator is used to capture something that can be measured.

The BPMN Service Engine automatically stores the data in the dimension business indicators in the predefined and custom sampling points defined for your process.

QUESTION 3

You have a requirement to dynamically assign tasks at run time based on the employee's title. Which three could be used to accomplish this assignment? (Choose three.)

- A. Use parametric roles to map the individual parametric role assignments and then map individual users to specific titles in the workspace using extended user properties.
- B. Use parametric roles to map the individual parametric role assignments and then map LDAP groups to specific titles in the workspace using extended user properties.
- C. In LDAP, ensure that individual users have been given titles and, in the workspace, associate the LDAP title attribute to a parametric role.

- D. Use a business rule in the human task to dynamically assign work items to specific users or an LDAP group based on employee title.
- E. In the process, edit the properties of the swimlane and assign a "title" string data object in the process payload to define a parametric role.

Correct Answer: ABD

QUESTION 4

Which two modeling approaches could be used to handle exceptions thrown by a service? (Choose two.)

- A. subprocess
- B. event subprocess
- C. error and event
- D. error catch event as a boundary event on the service task

Correct Answer: BD

Explanation: You can handle the exceptions that occur in an activity using the following:

*A boundary error catch event

*An event subprocessBoundary error catch events enable you to resume the main process flow after handling theexception.If you want to reuse the exception handling flow for multiple tasks in your process, then eventsubprocesses are more efficient than boundary catch events. Event subprocesses enable you todefine a cleaner process with less effort because the catch error event is located within the eventsubprocess. To reuse an exception handling flow using boundary catch events, you must define aboundary catch event for each of the tasks, and then connect those boundary events to theexception handling flow.

QUESTION 5

Which two statements accurately identify capabilities available for rules testing? (Choose two.)

- A. You can create a test suite or a test template without first creating a design function.
- B. You can test rulesets by creating a business rules function that calls the decision function.
- C. You can use Enterprise Manager to test rules via a decision function.
- D. You can mark individual test suites as "draft" to turn them off for test validation.

Correct Answer: BD

Explanation: You can test rulesets by creating a decision function and calling the decision function from Rules Designer with an Oracle Business Rules function.

Draft Test check box to turn off the test validation.
