QUESTION 1

Which is a benefit of service mediation?

- A. location independence, schema independence, and security independence
- B. programming language independence and state-full process integration with business rules
- C. easy mobile enablement of enterprise systems and cross-platform code generation integrated with online source-code-control systems such as Git, Mercurial, and Subversion
- D. easy application of security rules to existing mobile applications and legacy applications

Correct Answer: D

QUESTION 2

Which three technologies does Oracle Mobile Suite use for data shaping?

- A. XQuery
- B. XSLT
- C. MFL
- D. MAF
- E. JavaScript Schema

Correct Answer: ABC

QUESTION 3

If you want to create your own custom Springboard rather than use the out-of-the-box one, which two artifacts would you need to create?

- A. unbounded task flow
- B. feature
- C. AMX page
- D. menu items
- E. side bar

Correct Answer: AE

QUESTION 4

You and your colleague develop different parts of the same MAF application. He recently joined the company and needs to set up his workstation and devices for debugging. The application needs to be tested on Apple iPads and various Android-powered tablets. Your colleague has been assigned an Apple MacBook Pro as his workstation.

Which three tasks must you perform to ensure that your colleague will be able to debug the application on iOS and Android devices?

- A. Make sure that the network device access option is enabled in the maf-application.xml file.
- B. Obtain a debug signing certificate from the Google Play store developer support.
- C. Check that the settings in the Mobile Run configuration match those found in the cvm.properties file.
- D. Register any Apple device involved in testing and debugging under the appropriate Apple Developer account.
- E. Disable USB debugging on all the Android devices involved because this will interfere with the IDE's debugger.
- F. Establish a Bluetooth link between your colleague's workstation and the devices.

Correct Answer: ACD

QUESTION 5

Your customer requires that a MAF application must have a feature to return the user's current location on a map via the geolocation services. However, you are aware that it is not always possible to guarantee return of the user's current location in a mobile application.

Which are two valid reasons that the geolocation services may not be available to your application?

- A. Not all devices have GPS services.
- B. The user may disable the application's privileges to access the GPS.
- C. MAF does not support accessing the GPS services on iOS.
- D. The GPS cannot be accessed if the device does not have a network connection.

Correct Answer: AB
