QUESTION 1

You must implement GoldenGate in a master-to-master configuration. What output from the profiling scripts should you look for to ensure that your implementation is correct?

- A. Tables set with nologging
- B. Tables with Large Object (LOB) data types
- C. Tables that have conflicts
- D. Triggers and sequences

Correct Answer: C

QUESTION 2

Which Logdump command is used to check how many change records are in the trail file?

- A. STATS
- B. REPORT
- C. REPORTCOUNT
- D. COUNT

Correct Answer: D

Reference: https://docs.oracle.com/goldengate/1212/gg-winux/GLOGD/wu_logdump.htm#GLOGD121

QUESTION 3

You want to map exception to an exceptions table using the MAPEXCEPTION option of the MAP parameter. When should you proceed?

- A. when the names of both the source and target tables in the MAP statement are wildcarded
- B. when there is a unique restriction on the exception table
- C. when there is a primary key on the exception table
- D. when there is a failed operation logged on the source table

Correct Answer: A

Reference: https://docs.oracle.com/goldengate/1212/gg-winux/GWUAD/wu_errorhandling.htm#GWUAD502

QUESTION 4

You are experiencing an issue with the downstream database server for the Integrated Capture Downstream Model. Which step should you take to resolve the issue?

- A. Ensure that the Oracle database version on the downstream database server is the same version as the source Oracle version.
- B. Ensure that the platform type of the downstream database server is the same platform as the source database server.
- C. Ensure that the GoldenGate version used on the downstream database server is the same version used on the source database server.
- D. Ensure that the GoldenGate version used on the downstream database server is the same version used on the target database server.

Correct Answer: B

Reference: https://docs.oracle.com/goldengate/1212/gg-winux/GIORA/ic_deploy.htm#GIORA472

QUESTION 5

An integrated Replicat is running with PARALLELISM set to four, yet you discover that for a series of large operations, only one apply server is processing the operations. What is the reason for this issue?

- A. Operations are grouped into one apply server automatically based on GROUPTRANSOPS.
- B. Parallelism for an Integrated Replicat cannot exceed one.
- C. The operations for a particular table are pinned to a specific apply server.
- D. The operations are all part of one transaction.

Correct Answer: A
