QUESTION 1

If multiple changes occur on the source system but have not yet been processed by ODI, the J\$ table contains entries for each change for the records sharing the same PK.

What happens at run time when a Mapping gets executed? (Choose the best answer.)

- A. All distinct entries are processed.
- B. Only the latest entry is processed based on the JRN_DATE field.
- C. Only the first entry is processed based on the JRN_DATE field.
- D. A PK violation occurs due to the duplicated entries and the entries are inserted in the E\$ table.

Correct Answer: B

QUESTION 2

How are the ODI repositories upgraded? (Choose the best answer.)

- A. by using Opatch
- B. by using ODI Studio
- C. by using the import/export utilities
- D. by using Upgrade Assistant

Correct Answer: A

QUESTION 3

You are defining a data store in ODI metadata and want to add a primary key even if it does not physically exist on the related database catalog.

How can you accomplish this? (Choose the best answer.)

- A. You can add a primary key even if it does not physically exist on the related database catalog, by adding constraints on the data store.
- B. You can add a primary key even if it does not physically exist on the related database catalog, by adding constraints to the data store diagram.
- C. You cannot add a primary key if it does not physically exist on the related database catalog. You can flag only non-null conditions to be checked.

D. You cannot add a primary key if it does not physically exist on the related database catalog. You can reverse engineer only the existing constraints.

Correct Answer: D

QUESTION 5

Which statement is correct about all expressions in a Mapping? (Choose the best answer.)

- A. It is possible to set the execution location on source, staging area, or target.
- B. All transformations are executed on the staging area.
- C. Only the source and target servers can be used to execute expressions.
- D. All expressions are executed on the source area.

Correct Answer: A
