QUESTION 1

After you add the "Cost Center" field to the registration page in Oracle Identity Manager (OIM) self-service interface, the customer asks you to reorder the fields and move this new input text box to the bottom of the form.

Which sequence of steps do you use to reorder the form objects using the ADF web-based composer? (Choose the best answer.)

A. Select the form. EditpanelForm.On the Style components tab, change the order.

B. Select the form. EditpanelFormLayout.On the child components tab, change the order.

C. Select the form. EditpanelForm.On the child components tab, change the order.

D. Select the form. EditpanelFormLayout. On the Style components tab, change the order.

E. Select the form. EditpanelLayout. On the Style components tab, change the order.

Correct Answer: D

QUESTION 2

Identify the statement that is true about deploying application instances.(Choose the best answer.)

A. An IT resource instance is an object that combines an application instance and a resource object.

B. IT resource instances can reference the same application instance at the same time. The administrator can then assign one or more of these IT resource instances to a user, resulting in accounts being created.

C. Application instances can reference the same resource object. The administrator can then assign one or more of these application instances to a user, resulting in accounts being created.

D. A resource object is an object that combines an application instance and IT resources.

E. Resource objects cannot reference the same IT resources. The administrator can assign only one resource object to an IT resource.

Correct Answer: A

QUESTION 3

What Oracle Identity Manager (OIM) configuration is required to tie an approval workflow to the provisioning request generated through an access policy? (Choose the best answer.)

A. The request type selected in the approval policy for "Access Policy BasedApplicationInstance Provisioning" defines the workflow to be executed.

B. The SOA composite workflow defines the access policy to be used.

C. The access policy defines which SOA composite workflow is used.

D. The role definition defines what workflow needs to be initiated.

Correct Answer: A

QUESTION 4

Which statement is true about the check-in and check-out capabilities in Oracle Privileged Account Manager (OPAM)? (Choose the best answer.)

A. Authorized users can check out an account, which provisions it; they can then check in the account, which de-provisions it.

B. Authorized and non-authorized users can check in an account, which provisions it; they can then check out the account, which de-provisions it.

C. Authorized users can check out an account before using it; they can then check in the account when they are finished with it.

D. Authorized and non-authorized users can check out an account before using it; they can then check in the account when they are finished with it.

E. Authorized users can check out an account before using it, but administrators must check in the account.

Correct Answer: C

Oracle Privileged Account Manager requires all authorized users to check out an account before using it, and then to check that account back in when they are finished with it. Oracle Privileged Account Manager audits account check outs and check ins by tracking the real identity (the person\\'s name) of every shared administrator user at any given moment in time. By using this information, Oracle Privileged Account Manager can provide a complete audit trail that shows who accessed what, when, and where.

QUESTION 5

How are pre-existing users and roles synchronized in Oracle Identity Manager 11gR2 after LDAP sync is enabled? (Choose the best answer.)

A. LDAP sync must be configured when Oracle Identity Manager is installed.

B. This is done through a scheduled job in Oracle Identity Manager.

C. The users and roles need to be created manually in the LDAP provider.

D. This is done automatically after LDAP sync is enabled.

Correct Answer: B
