### QUESTION 1

Which statement is true about the check-in and check-out capabilities in Oracle Privileged Account Manager (OPAM)? (Choose the best answer.)

- A. Authorized users can check out an account, which provisions it; they can then check in the account, which de-provisions it.
- B. Authorized and non-authorized users can check in an account, which provisions it; they can then check out the account, which de-provisions it.
- C. Authorized users can check out an account before using it; they can then check in the account when they are finished with it.
- D. Authorized and non-authorized users can check out an account before using it; they can then check in the account when they are finished with it.
- E. Authorized users can check out an account before using it, but administrators must check in the account.

Correct Answer: C

Oracle Privileged Account Manager requires all authorized users to check out an account before using it, and then to check that account back in when they are finished with it. Oracle Privileged Account Manager audits account check outs and check ins by tracking the real identity (the person's name) of every shared administrator user at any given moment in time. By using this information, Oracle Privileged Account Manager can provide a complete audit trail that shows who accessed what, when, and where.

### QUESTION 2

Which two statements are true about Oracle Privileged Account Manager (OPAM)? (Choose two.)

- A. The communications between the CLI console and the OPAM Server do not accept SSL.
- B. Passwords are reset to a random value on checkin and checkout by default.
- C. All of the passwords needed by OPAM at run time are stored in the Credential Store through the Integrated Connector Framework.
- D. The OPAM User Interface (UI) and Server must be deployed in different WebLogic domains.
- E. OPAM authentication relies on JAVA Authentication and Authorization Service (JAAS) support in WebLogic.

Correct Answer: BE

### QUESTION 3

You are defining a segregation of duty (SOD) policy at the role level in Oracle Identity Analytics (OIA).

Which two statements are true? (Choose two.)

- A. Role SOD definitions can be configured on the "Exclusion Roles" tab. By default, this tab is hidden.
- B. Role SOD definitions can be configured as an audit policy.
- C. A maximum of two conflicting roles can be defined for each audit policy.
- D. SOD policy changes must be approved by both the policy owner and the policy remediator.
- E. The DefaultSODApproval workflow must be attached only at the request level.

Correct Answer: AB

---

#### QUESTION 4

How can you provision to a resource when Oracle Identity Manager cannot connect to that resource?(Choose the best answer.)

- A. By creating a custom resource project
- B. By using a disconnected resource model
- C. By opening a service request or a ticket
- D. Provisioning is not supported for such resources.

Correct Answer: A
