QUESTION 1

A company has a billing and ordering application accessed by ten million subscribers. Some subscribers rarely log in, and others log in almost every day. The company\'s goal is to provide the quickest possible response to web requests. Accesses make repeated reads and occasional writes to user sessions, each of which is 4 KB. Which architecture meets these needs?

A. a replicated cache, so that applications can always access data locally

B. there is too much data for Coherence to be effective in this scenario

C. a distributed cache with sticky sessions and near caching

D. a small replicated cache for frequent users and database read-through

Correct Answer: C

QUESTION 2

Identify four components of the Oracle Cloud Application Foundation. (Choose four.)

A. WebLogic Server

B. Database

C. Virtual Assembly Builder

D. Exalogic Elastic Cloud Software

E. Tuxedo

F. Coherence

Correct Answer: ACEF

QUESTION 3

You are using Coherence to store state data that gets read frequently and updated only occasionally. Only 100 or so clients are logged in at any time, and state data is retrieved at login. You are running out of physical memory on the cache server tier, but CPU and network utilization is low. You have 100 GB Solid-State Drives on every system, including clients. You would also like to provide faster access to state data for logged-in users.

Which configuration should you use for your system?

A. Configure Elastic Data on your clients with a near cache.

B. Configure a near cache on your client and a RAM Journal on your cache servers.

C. Configure a near cache on your client and a Flash Journal on your cache servers.

D. Because near caching does not work with Elastic Data, configure a near cache and an eviction policy on the cache

servers.

Correct Answer: C

QUESTION 4

When integrating a CacheStore with a database, which technique is correct for managing database connections?

A. Use a connection pool provided by an application server, the JDBC driver, or a third party.

B. Create a new connection every time a CacheStore method is invoked.

C. Create a new connection in the CacheStore constructor and store a to it that can be accessed by the CacheStore methods.

D. Configure Coherence to use its built-in capabilities to manage connections.

Correct Answer: A

QUESTION 5

Which change cannot be made in an assembly at deployment time?

A. setting the appliance\\'s memory and CPU requirements

B. changing the listening port of the product

C. not deploying an appliance by setting its target count to zero

D. not deploying an appliance by removing it from the assembly

Correct Answer: A
