### QUESTION 1

Which two hardware requirements exist for an HA-enabled server pool with Live Migration?

- A. Each server in the pool must have the exact same model of processor.
- B. Each server in the pool must have the same amount of memory.
- C. Each server in the pool must have similar processors, specifically vendor, family and steppings.
- D. Each server in the pool must be connected to shared storage.
- E. Each server in the pool must be large enough to support the largest virtual machine in the pool

Correct Answer: CD

---

### QUESTION 2

When setting up an iSCSI repository, what three steps must be completed before running the repos.py commands?

- A. The iSCSI LUN must be formatted with the OCFS2 file system.
- B. The iscsi-adm service must be installed and running.
- C. The iSCSI daemon must be installed and running.
- D. Multipathing must be configured and the multipath daemon must be running.
- E. The iSCSI LUNs must be mapped to local devices.

Correct Answer: ABC

---

### QUESTION 3

In hardware virtualized environment, which answer best describes the drivers that are used in dom0 and the guest to communicate network I/O requests?

- A. QEMU emulation is used in dom0, and a netfront driver is used in the guest.
- B. A native device driver is used in dom0, and QEMU emulation is used in the guest.
- C. A netfront driver is used in dom0, and a netback driver is used in the guest.
- D. QEMU emulation is used in dom0, and a native device driver is used in the guest.
- E. Native drivers are used in both dom0 and the guest

Correct Answer: C

---

#### QUESTION 4

What three artifacts are created as a result of running the JeOS tool?

- A. a System.img file representing the operating system
- B. optional image files as specified in the command
- C. a README file with product name, version number and build timestamp
- D. a vm.cfg file pointing to the created images, along with specified memory and CPU information
- E. a tar.gz file with all of the images, README and vm.cfg files compressed

Correct Answer: ADE

---

#### QUESTION 5

What two steps are required to ensure that virtual machines failover to a new server when their current server goes down?

- A. Ensure that the Oracle VM Manager is always available by installing Oracle Clusterware.
- B. Turn on High Availability Mode in the server pool.
- C. Assign a virtual IP address to the server pool.
- D. Turn on HA in all virtual machines that will be restarted.
- E. Ensure all servers in the pool have identical CPU and memory.

Correct Answer: AB

Explanation: In the question two steps are required so that you have to answer two here. Oracle Clusterware Ensure that your server is going to be restarted facility and it will provide you the failover feature for you as well. You have to turn on HA Mode in the server pool.
