-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

MySQL is installed on a Linux server and has the following configuration:

```
[mysqld]
```

```
User=mysql
```

```
Datadir=/data/mysql
```

As the `root` user, change the datadir location by executing:

```
Shell> cp -R /var/lib/mysql/data/mysql/
```

```
Shell> chown -R mysql /data/mysql/
```

What is the purpose of changing ownership of datadir to the `mysql` user?

- A. MySQL cannot be run as the root user.
- B. MySQL requires correct file ownership while remaining secure.
- C. MySQL needs to be run as the root user, but file cannot be owned by it.
- D. The mysqld process requires all permissions within datadir to be the same.

Correct Answer: B

QUESTION 2

Full Atomicity, Consistency, Isolation, Durability (ACID) compliance is a necessity for a new application, which heavily reads and writes data.

This requires the following config file options:

```
Sync_binlog=1 Innodb_flush_log_at_trx_commit=1 Innodb_doublewrite=1
```

However, this configuration is expected to introduce disk I/O overhead.

What three changes will reduce disk I/O overheads?

- A. Use of soft links for database directories on the same physical disk
- B. Use of separate directories on the same physical disk for log files and data files
- C. Placement of InnoDB log files and datadir on separate physical disks
- D. Allocation of RAM to the buffer pool such that more of the data can fit in RAM
- E. Use of delay_key_write=ON for batch index update

Correct Answer: DE

QUESTION 3

You adjust a default configuration to the following `/etc/my.cnf` on a Linux installation:

```
[mysqld]
```

```
Log-bin
```

```
Binrylog_format=ROW
```

You do not notice the spelling error in `binrylog_format` and restart your production server.

How does the MySQL server behave with incorrectly spelled options?

- A. Mysqld uses internal configuration versioning and reverts to the previous configuration.
- B. When using `mysql_config_editor` for configuration adjustments, it detects incorrect syntax and typing mistakes.
- C. The `mysqld_safe` script skips the unknown variable and starts using the remaining configuration changes.
- D. Mysqld prints to the error log about an unknown variable, and then exits.

Correct Answer: D

QUESTION 4

What are two methods of taking a binary backup of a Mysql Server using InnoDB storage engine?

- A. Mysql Enterprise Backup
- B. Mysqldump with `binary-data` option
- C. Mysqlhotcopy
- D. File system snapshots
- E. Mysqldumpslow

Correct Answer: AB

QUESTION 5

A Mysql instance is running on a dedicated server. Developers access the server from the same network subnet. Users access the database through an application that is running on a separate server in a DMZ.

Which two will optimize the security of this setup?

- A. Disabling connections from named pipes or socket files (depending on the operating system of the server)
- B. Running the server with skip-networking specified
- C. Limiting logins to originate from the application server or the server\\'s subnet
- D. Starting the server with bind- address=0.0.0.0 specified
- E. Installing Mysql on the application server, and running the database and application on the same server
- F. Enabling and using SSL for connections to the Mysql database

Correct Answer: EF
