### QUESTION 1

A user has deleted the wrong row in a table and you are preparing a point-in-time recovery skipping the DELETE event. The server is configured with:

| Variable_name            | Value |
|--------------------------|-------|
| Enforce_gtid_consistency | NO    |
| gtid_mode                | NO    |

You have identified that the DELETE statement to skip has the Global Transaction Identifier (GTID)

``dbbe7da-fe25-11e2-b6c7-0800274aa49e:5`` and you replay the binary log with:

```
mysqlbinlog exclude-gtids=\\` dbbe07da-fe25-11e2-b6c7-0800274aa49e:5\\` binlog.00000.2 | mysql
```

However all events were skipped instead of just the one deleting the wrong row.

What is the reason for this?

- A. Mysqlbinlog ignores arguments to exclude-gtids-it means ignore all events with GTIDs.
- B. The server keeps track of which GTIDs have already been executed and skips those.
- C. Enforce\_gtid\_consistency is set to ON.
- D. Gtid\_mode must be set to AUTO during point in time recoveries.

Correct Answer: B

### QUESTION 2

Consider the events\_% tables in performance Schema.

Which two methods will clear or reset the collected events in the tables?

- A. Using DELETE statements, for example, DELETE FROM performance\_schema.events\_waits\_current;
- B. Using the statement RESET PERFORMANCE CACHE;
- C. Using the statement FLUSH PERFORMANCE CACHE;
- D. Using TRUNCATE statements, for example, TRUNATE TABLE performance\_schema.events\_waits\_current;
- E. Disabling and re-enabling all instruments
- F. Restarting Mysql

Correct Answer: DE

### QUESTION 3

Your developers have created table to store some of their program's data. After examining the slow Query Log, you see that they are using the LIKE operator and SUBSTR () functions against a VARCHAR (10000) column quite often.

An example of the start of one row of data: `GREEN01020495888331993-12-10/2...`

What should you do to improve the overall performance?

- A. Convert the column to TEXT and add a fulltext index to the table.
- B. Create multiple prefix indexes of differing lengths.
- C. Convert their column to BINARY.
- D. Redesign the table so that the most commonly searched for string patterns are in their own columns.

Correct Answer: D

---

### QUESTION 4

You want to shutdown a running Mysql Server cleanly.

Which three commands that are valid on either Windows or Linux will achieve this?

- A. Shell> pkill u mysql mysqld\_safe
- B. Shell> service mysql safe\_exit
- C. Shell> /etc/init.d/mysql stop
- D. Shell> mysqladmin u root p shutdown
- E. Mysql> STOP PROCESS mysqld;
- F. Shell> net stop mysql
- G. Shell> nmc mysql shutdown

Correct Answer: CDE

---

### QUESTION 5

Which three statements are true about memory buffer allocation by a MySQL Server?

- A. Global buffers such as the InnoDB buffer pool are allocated after the server starts, and are never freed.

- B. Thread buffers are allocated when a client connects, and are freed when the client disconnects.
- C. Buffers that are needed for certain operation are allocated when the operation starts, and freed when it ends.
- D. User buffers are allocated at server startup and freed when the user is dropped.
- E. All dynamic buffers that are set with a SET GLOBAL statement immediately get allocated globally, and are never freed.

Correct Answer: ABC
