### QUESTION 1

You are using CTIDS in replication. You need to skip a transaction with the CTID of aaa-bbb- ccc-ddd-eee : 3 on a slave.

Which command would you execute from a Mysql prompt?

- A. STOP SLAVE; SETGTID\_NEXT="aaa-bbb-ccc-ddd-eee: 3"; BEGIN; COMMIT; SET GTID\_NEXT="AUTOMATIC"; START SLAVE
- B. STOP SLAVE; SET GLOBAL SQL\_SLAVE\_SKIP\_COUNTER=1; START SLAVE;
- C. STOP SLAVE; BEGIN; SET GTID\_IGNORE="aaa-bbb-ccc-ddd-eee: 3"; COMMIT; START SLAVE;
- D. STOP SLAVE; RESET SLAVE; BEGIN; SKIP NEXT GTID; COMMIT; START SLAVE;

Correct Answer: B

---

### QUESTION 2

You have table `apps\`,\`userdata\` on server that uses MyISAM storage engine. You want to transfer this data to server but use InnoDB engine instead.

You execute the following commands:

ServerB commands:

```
Shell> mysqldump u root h server no-data apps userdata | mysql u root p apps Shell> mysql u root p h server e `ALTER TABLE `apps\`,\`userdata\` ENGINE=InnoDB;\` Shell> mysqldump u root p h server no-create-info order-by-primary apps userdata | mysql u root p apps
```

What effect does the order-by-primary argument have on the mysqldump command?

- A. It exports tables with the most indexes first to assist with import speeds.
- B. It ensures that unique indexes have no conflicts when the data is dumped.
- C. It orders by primary key to assist in speeding up importing to InnoDB tables.
- D. It must be specified so index data is dumped correctly when on-create-info is used.

Correct Answer: C

---

### QUESTION 3

Which two capabilities are granted with the SUPER privilege?

- A. Allowing a client to kill other client connections

- B. Allowing a client to shut down the server
- C. Allowing change of the server runtime configuration
- D. Allowing client accounts to take over the account of another user

Correct Answer: AB

#### QUESTION 4

An employee cannot access the company database. You check the connection variables:

```
Mysql> SHOW GLOBAL VARIABLES LIKE `connect%`;
```

Variable_name	Value
...	
Connect_timeout	10
Init_connect	
Max_connect_errors	10
Max_connections	10
Max_user_connections	10

8 rows in set (0.00 sec)

A look at the user privileges shows:

```
GRANT... TO `bob`@`%`, example.com WITH MAX_USER_CONNECTIONS 0; GRANT... TO `key`@`%`,  
example.com WITH MAX_USER_CONNECTIONS 1; GRANT... TO `joe`@`%`, example.com WITH  
MAX_USER_CONNECTIONS 50;
```

What is a valid explanation for why one of the users is unable to connect to the database?

- A. Bob has max\_user\_connections set to zero, which blocks all his connections
- B. Joe has exceeded the max\_user\_connections global limit.
- C. All users are blocked because max\_user\_connections is accumulated over the host account information.
- D. Kay is already connected elsewhere and attempting to log in again.
- E. Connect\_timeout is too small to allow a connection to occur.

Correct Answer: A

#### QUESTION 5

Consider the query:

mysql> SET @run = 15;

mysql> EXPLAIN SELECT objective, stage, COUNT (stage) FROM iteminformation

WHERE run=@run AND objective=\\'7.1\\'

GROUP BY objective,stage

ORDER BY stage;

Id	Select_type	Table	Type	Possible_keys	Key	Key_len	Ref	Rows	Extra
1	SIMPLE	Iteminformation	Ref	Run,run_2	Run_2	5	Const	355	Using where

The iteminformation table has the following indexes; mysql> SHOW INDEXES FROM iteminformation:

Table	Non_unique	Key_name	Seq_in_index	Column_name	collation	cardinality
Iteminformation	0	Run	1	Run	A	NULL
Iteminformation	0	Run	2	Name	A	NULL
Iteminformation	1	Run_2	1	Run	A	20
Iteminformation	1	Run_2	2	Stage	A	136

This query is run several times in an application with different values in the WHERE clause in a growing data set.

What is the primary improvement that can be made for this scenario?

- A. Execute the run\_2 index because it has caused a conflict in the choice of key for this query.
- B. Drop the run\_2 index because it has caused a conflict in the choice of key for this query.
- C. Do not pass a user variable in the WHERE clause because it limits the ability of the optimizer to use indexes.
- D. Add an index on the objective column so that it can be used in both the WHERE and GROUP BY operations.
- E. Add a composite index on (run,objective,stage) to allow the query to fully utilize an index.

Correct Answer: B
