QUESTION 1

Given:

```
public class SomeClass {
    @Resource (name="java:comp/env/concurrent/TaskExecutor")
    ManagedExecutorService mes;
    public void createTask() {
        Future<Integer> result=
                    mes.sibmit(new MyCallable<Integer>());
    }
}
```

How often does the submitted task run?

A. need more details to determine

B. once

C. as many times as you like

D. based on a schedule

Correct Answer: A

QUESTION 2

A third-party service equipment is used for various purposes in a manufacturing facility and needs to be overhauled once a year. This equipment is charged based on its consumption without a project dependency.

At this point, it should be transferred out of the vendor\\'s warehouse for maintenance and then returned back in the future depending upon the requirement.

The material stock transfer should happen with an offline approval and with an account alias as a logical reference.

What is the ideal way to handle this process?

A. Transfer Order

B. Requisitions

C. Move Request

D. Miscellaneous Transaction

E. Subinventory Transfer

Correct Answer: D

QUESTION 3

You have an organization that runs both its domestic and international business from the same offices. However, the organization does not want the domestic side of the business to be able to transact on the international side, even though they are selling the same material.

How do you configure your enterprise to meet this requirement?

A. Set up the domestic and international businesses as separate operating units.

B. Set up the domestic and international businesses as separate projects.

C. Set up the domestic and international businesses as separate business units.

D. Use data access security to separate what each customer can control.

E. Set up the domestic and international businesses as separate cost centers.

Correct Answer: C

QUESTION 4

You need to develop a chat application, which allows the display of emoticons and images together with text messages.

How should you configure a WebSocket endpoints to receive both text and binary messages?

A. Create two @onMessage methods in the same endpoint with appropriate parameter types.

B. Define the @onMessage methods in your endpoint with Object as parameter and check the actual type in your code.

C. You can achieve this only by creating separate WebSocket endpoints for each message type.

D. Create two @onMessage methods, each with appropriate decoder attribute in the same endpoint.

Correct Answer: D
