### QUESTION 1

What are two ways in which customers can receive notifications such as outages, configuration changes, database emergencies, and other information on their Database as a Service instances?

- A. Email
- B. Browser pop-ups
- C. Direct support call from an Oracle representative
- D. SMS-notification tab on the dashboard
- E. Application-to-application messaging

Correct Answer: AD

---

### QUESTION 2

You get a maintenance-notification about your MySQL Enterprise Edition in Oracle Cloud Infrastructure (OCI) Compute instance. What is the implication?

- A. You can expect an outage of your MySQL OCI instance during the planned time..
- B. Depending on the planned outage, you may not be affected by it. You need to read the maintenance details in the support notice.
- C. You need to agree to the maintenance windows. If not, you are not affected by the outage.
- D. There are no maintenance operations planned. You need to do them manually.

Correct Answer: A

---

### QUESTION 3

Assume that MySQL Enterprise Monitor is configured to monitor MySQL 8.0.10 or a later instance. Which three features are available?

- A. creating e-mail alerts and SNMP traps for MySQL warnings
- B. starting and stopping the MySQL instance
- C. analyzing executed MySQL queries
- D. deploying MySQL agent on supported target operating system
- E. monitoring the availability of the MySQL Instance
- F. tracing import and export with mysqldump

Correct Answer: ADF

---

#### QUESTION 4

The replication for a Master and Slave MySQL Servers is up and running. The disk space for Master Server is continuously growing. The binlog size keeps growing. Which two methods can fix the issue?

- A. On the Master server, disable binlog by removing the --log-bin option.
- B. Set the expire\_logs\_days system variable to expire binary log files automatically after a given number of days.
- C. To safely purge binary log files, perform these steps:

1.

On each slave server, use show slave status to check which log file it is reading.

2.

Obtain a listing of the binary log files on the master server with show binary logs.

3.

Determine the earliest log file among all the slaves. This is the target file. If all the slaves are up- to-date, this is the last log file on the list.

4.

Make a backup of all the log files you are about to delete. (This step is optional, but always advisable.)

5.

Purge all log files up to but not including the target file by using the purge binary logs statement

- D. Execute the purge binary logs statement without argument.
- E. Delete all binlog files manually on the file system to release storage spaces.

Correct Answer: BC

---

#### QUESTION 5

What is true about MySQL Enterprise Transparent Data Encryption (TDE)?

- A. Data is encrypted automatically, in real time, after it is written to storage.
- B. Enables data-at-rest encryption by encrypting the physical files of the database.
- C. Encryption key is stored in a centralized key memory location
- D. Tablespace keys are managed manually behind the scenes.

Correct Answer: B
