- ⚙ **365 Days** Free Update
- ⚙ **800,000+** Satisfied Customers

#### QUESTION 1

Which statement is true when connecting OCI Marketplace image to shared autonomous database?

- A. Compute Image and Shared ADB must be in same VCN and Subnet
- B. ADB must be configured with NSG
- C. ADB must be configured with Private endpoints
- D. Cannot connect OCI Market image to shared ADB

Correct Answer: A

---

#### QUESTION 2

Which statement is true when you provision an Autonomous Database using the cloning method?

- A. After an Autonomous database is created using a clone, the network access option can be changed.
- B. A clone database source can be a running database instance.
- C. A clone database source can be from a point-in-time backup that is less than 2 hours old.
- D. When cloning an Autonomous Database, Oracle Machine Learning workspaces, projects, and notebooks of the source database are cloned to the new database.

Correct Answer: B

---

#### QUESTION 3

Which native data type is used to store spatial information?

- A. SDO\_RELATE
- B. SDO\_GEOMETRY
- C. SDO\_LOCATION
- D. GEO\_JSON

Correct Answer: B

---

#### QUESTION 4

Which three Oracle Cloud Infrastructure (OCI) resources do you need to configure before provisioning your Autonomous Database with Private Endpoint?

- A. Network Security Group
- B. Security List
- C. VCN
- D. Route Table
- E. Subnet

Correct Answer: ACE

To provision an Autonomous Database with a private endpoint, you must have the following resources already created:

A VCN within the region that will contain your Autonomous Database with shared Exadata infrastructure.

Cannot be changed after provisioning. A private subnet within your VCN configured with default DHCP options. Cannot be changed after provisioning.

At least 1 network security group (NSG) within your VCN for the Autonomous Database. Can be changed or edited after provisioning.

## QUESTION 5

While creating a business model what advanced options you can enable or disable? (Choose three)

- A. Business Object Security Feature
- B. Analytic View Transparency View
- C. Autonomous Aggregate Cache
- D. Display private tables
- E. Analytic View Base Table Query Transformation

Correct Answer: BCE

## Creating and Editing Business Models

From the Business Models page, you can create a business model and view information about it. You can also edit a business model and perform other actions on it.

When you create a business model, you identify a fact table that contains the data to inspect. The Business Model creation tool looks at the contents of that table, identifies any hierarchies in the fact table, and searches for other tables that may contain related hierarchies. It then suggests a business model to which you can make any desired adjustments.

While creating a business model, you can enable or disable the following advanced options:

- Autonomous Aggregate Cache, which uses the dimensional metadata of the business model to manage a cache and can improve query response times.
- Analytic View Transparency Views, which presents analytic views as regular database views and enables you to use your analytic tools of choice while gaining the benefits of analytic views.
- Analytic View Base Table Query Transformation, which enables you to use your existing reports and applications without requiring changes to them.
