QUESTION 1

Which two statements about fault domains are true? (Choose two.)

- A. A fault domain is a grouping of hardware and infrastructure within an availability domain
- B. Each availability domain contains three fault domains
- C. A failed instance in a fault domain is automatically relaunched
- D. A fault domain is selected automatically based on usage data

Correct Answer: AB

QUESTION 2

You had an outage in your application caused by the loss of a shared volume provisioned by File Storage Service (FSS). At this point, you need to restore the data from a snapshot you created of the FSS. What are the steps to restore the data?

- A. Access the directory where the shared volume is mounted, then cd into .snapshot folder, find the snapshot folder you want to recover and use cp or rsync tool to copy the files to the original location.
- B. Open OCI Console, select File Storage Service, find the shared storage, then click on snapshot and restore.
- C. Open OCI Console, select File Storage Service, find the snapshot you created and click restore.
- D. Access the directory, where you mounted the shared volume, then cd into .snapshot folder and find the snapshot folder you want to recover and rename that folder to the original folder name.

Correct Answer: B

QUESTION 3

You have created a public subnet in a VCN, and your public subnet has a Route Table, a Security List, and an Internet Gateway. However, none of the compute instances can connect to the Internet.

Which two are possible reasons for the connectivity issue? (Choose two.)

- A. There is no Dynamic Routing Gateway (DRG) associated with the VCN.
- B. The Route Table has no default route for routing traffic to the Internet Gateway.
- C. There is no stateful ingress rule in the Security List associated with the public subnet.
- D. There is no stateful egress rule in the Security List associated with the public subnet.

Correct Answer: AC

QUESTION 4

Which does NOT set a variable in Terraform?

- A. Passing the variable with a var statement to Terraform
- B. Setting the variable as key value pairs in a file in a subdirectory named tfvar
- C. A default value in the variable declaration within a TF plan file
- D. Setting the environment variable using a TF_VAR_ predicate in front of the variable name

Correct Answer: A

QUESTION 5

Which two statements are true about an Oracle Cloud Infrastructure object storage bucket? (Choose two.)

- A. You can associate a bucket with multiple compartments
- B. You cannot change a bucket from private to public after it is created
- C. You can associate a bucket with only a single compartment
- D. You cannot edit or append data to an object, but you can replace the entire object

Correct Answer: CD
