QUESTION 1

An administrator is unable to connect the Cisco Nexus 1000V to the vCenter server. The following error is displayed:

```
{ERROR: [VMWARE-VIM] Extension key was not registered before its use.}
```

Which action would resolve this error?

- A. From the Cisco Nexus 1000V, use the connect command.
- B. From the Cisco Nexus 1000V, use the vmware vc extension-key command.
- C. From VMware vCenter, create a new vSphere Distributed Switch.
- D. From VMware vCenter, register the Cisco Nexus 1000V xml plug-in.

Correct Answer: D

QUESTION 2

A Cisco Unified Computing System (UCS) blade encounters a hardware failure that requires the service profile to be associated to another blade.

Once the service profile is associated to another blade, how does the host boot the existing operating system?

- A. The service profile maintains pointers to the local hard drives on the failed blade allowing true stateless migration.
- B. The service profile maintains the boot-policy to ensure the replacement blade boots to the existing LUN on the storage array.
- C. The service profile migrates the hard drive content from the failed blade to the new blade during service profile re-assignment.
- D. The service profile migration requires that the drives from the failed blade are physically migrated to the replacement blade to boot the existing operating system.

Correct Answer: B

QUESTION 3

Which two statements are correct regarding VCE implementation of a persistent scratch partition? (Choose two.)

- A. You must configure a persistent scratch partition on the boot-from-SAN VMFS data store.
- B. You must configure a persistent scratch partition on the boot-from-SAN NFS data store.
- C. Vblock Systems use centralized monitoring with syslog and SNMP in place of a persistent scratch location.
- D. VCE uses the persistent scratch partition to ensure that critical log files are available.

Correct Answer: AD

QUESTION 4

What are three possible results when enabling vSphere High Availability (HA)? (Choose three.)

- A. Virtual machines will migrate from one host to another as resource availability changes.
- B. An ESXi host fails and some of the virtual machines restart on other hosts in the cluster.
- C. A virtual machine fails and automatically restarts on another host in the cluster.
- D. VMware vSphere Fault Tolerance will be enabled.
- E. A virtual machine is unable to boot due to limited cluster resources.

Correct Answer: BCE

QUESTION 5

-- Exhibit -

-- Exhibit -Click the Exhibit button.

Vblock Systems have multiple power connector capabilities.

Which power receptacle is shown in the exhibit?

- A. 60A 250V, single phase (IEC 60309)
- B. 60A 120V, 3 phase (IEC 60309)
- C. 60A 250V, 3 phase (IEC 60309)
- D. 30A 120V, 3 phase (C8303 L6-30P)

Correct Answer: A
