QUESTION 1

Your client wants space required for the virtual disk to be allocated when the virtual disk is created. Also, any data remaining on the physical device should not be erased during creation, but be zeroed out on demand, at a later time, on the first write from the virtual machine. Which storage provision type would you use to meet the client's requirements?

- A. thick LUN provisioning, eager zeroing
- B. thin LUN provisioning, eager zeroing
- C. thin LUN provisioning, lazy zeroing
- D. thick LUN provisioning, lazy zeroing

Correct Answer: D

QUESTION 2

What are three approved VCE security guidelines for use in the Vblock System? (Choose three.)

- A. Ensure that the vpxuser auto-password change meets policy.
- B. Disable SSL for Network File Copy (NFC).
- C. Enable the ESXi firewall on all hosts.
- D. Configure the remote Syslog for VMware ESXi hosts.
- E. Use independent nonpersistent disks.

Correct Answer: ACD

QUESTION 3

You upgrade an ESXi 4.x host to an ESXi 5.x host using VMware Update Manager. It appears to complete the installation, but the system does not boot. You decide to roll back the host to the previous build. After using the Shift-R option on boot up, you receive the error "No alternative hypervisor to roll back to". What is causing this error?

- A. The hardware is not supported with the ESXi 5.x.
- B. The ISO file in the baseline is corrupt.
- C. The data store containing the operating system has become corrupt.
- D. There are differences in the boot loaders between the two versions.

Correct Answer: D

QUESTION 4

Which statement is correct about using VMware Inventory Services?

- A. It tracks virtual machine locations in the data center.
- B. It improves administrative user performance and reduces traffic with the vCenter.
- C. It tracks data center objects and performs reports.
- D. It improves virtual machine responsiveness.

Correct Answer: B

QUESTION 5

A vApp has been deployed with the wrong IP address information and must be updated. You have logged into the virtual machine, and updated the static IP address from the console, validating connectivity. After a system reboot, users are no longer able to connect to the system.

What is the problem?

- A. The IP configuration should take place in the vApp container.
- B. vApps require DHCP assigned addresses instead of static.
- C. The segment ID was incorrectly configured for the VXLAN.
- D. The IP configuration should take place in the vSwitch layer.

Correct Answer: A
