QUESTION 1

Choose the most difficult stage of an endpoint attack.

A. acquiring access to an endpoint inside the network

B. propagating a botnet once you have access to the systems

C. acquiring a list of ports open on a targeted computer

D. delivering a phishing email to employees

Correct Answer: A

QUESTION 2

What is the main characteristic of a hub?

A. It regenerates the signal and retransmits on all ports.

B. It uses a MAC address table to switch frames.

C. When a packet arrives, the hub looks up the routing table before forwarding the packet.

D. It supports full-duplex mode of transmission.

Correct Answer: A

QUESTION 3

The following is an example of an Angler exploit kit chain of events: Place the attack steps in order from start to finish.

Select and Place:

After compromising the victim's host, the actual malware payload is delivered to the victim's machine	
The victim browses to a compromised legitimate web site	
Malware CnC traffic occurs between the victim's machine and the threat actor's CnC servers	
A malicious obfuscated script on the compromised legitimate web site redirects the victim to the rapidly changing Angler landing page containing the exploit	
The Angler exploit kit scans the victim's machine for software vulnerabilities and then delivers an exploit that targets a vulnerability present on the victim's machine	

Correct Answer:

	The victim browses to a compromised legitimate web site
	A malicious obfuscated script on the compromised legitimate web site redirects the victim to the rapidly changing Angler landing page containing the exploit
	The Angler exploit kit scans the victim's machine for software vulnerabilities and then delivers an exploit that targets a vulnerability present on the victim's machine
	After compromising the victim's host, the actual malware payload is delivered to the victim's machine
	Malware CnC traffic occurs between the victim's machine and the threat actor's CnC servers

QUESTION 4

Which command is used to view the Windows Registry?

A. winedit

B. winreg

C. regedit

D. cntedit

Correct Answer: C

QUESTION 5

What is the key to the success of an MITM attack?

A. The hacked machine becomes overwhelmed with responses.

B. TCP/IP bugs make it easy to crash older operating systems.

C. The attacker waits until after a communication session is established.

D. Packet flooding consumes resources.

Correct Answer: C
