QUESTION 1

What is the purpose of a DLP policy?

- A. to prevent end users from abusing corporate email services
- B. to prevent end users from participating in internal phishing attacks
- C. to prevent end users from sending sensitive or critical information outside the corporate network
- D. to prevent end users from inadvertently disrupting corporate email services

Correct Answer: C

QUESTION 2

Which one of these source ports does a client dynamically use when it connects to a server that is listening on a well-known port?

- A. ephemeral
- B. registered
- C. well-known
- D. first available port on the client system

Correct Answer: A

QUESTION 3

Match the action to the stage of the web attack.

Select and Place:

- An exploit kit is "drive-by" downloaded
- Encrypted malware is decrypted and executed on the victim's machine
- The exploit kit sends a request to the exploit kit server to get the exploit code that compromises the vulnerable software on the victim's machine
- The victim visits a compromised web site, which redirects the victim to a site with malicious code
- Malicious code connects the victim's machine to the malware downloaded server to retrieve the payload

-

Correct Answer:

-
-
-
-
-

- The victim visits a compromised web site, which redirects the victim to a site with malicious code
- An exploit kit is "drive-by" downloaded
- The exploit kit sends a request to the exploit kit server to get the exploit code that compromises the vulnerable software on the victim's machine
- Malicious code connects the victim's machine to the malware downloaded server to retrieve the payload
- Encrypted malware is decrypted and executed on the victim's machine

QUESTION 4

For TCP connection establishment, which one of the following statements is true?

- A. Only the sender generates a sequence number.
- B. Both the sender and receiver generate sequence numbers.
- C. The sequence numbers for both the sender and the receiver must match.
- D. Only the receiver generates a sequence number.

Correct Answer: B

QUESTION 5

What do you need to do in order to ensure that a Sysinternal tool runs properly on a Windows system?

- A. open the Sysinternal tool as administrator
- B. uninstall the corresponding Windows tool before installing the Sysinternal tool
- C. run the Sysinternal tool when logged in as a user with a privilege level of 10 or higher
- D. use control panel to uninstall the corresponding Windows tool, then reboot the system before installing the Sysinternal tool

Correct Answer: A
