QUESTION 1

Which of the following is NOT one of the techniques used to respond to insider threats:

- A. Placing malicious users in quarantine network, so that attack cannot be spread
- B. Preventing malicious users from accessing unclassified information
- C. Disabling the computer systems from network connection
- D. Blocking malicious user accounts

Correct Answer: B

QUESTION 2

An organization faced an information security incident where a disgruntled employee passed sensitive access control information to a competitor. The organization's incident response manager, upon investigation, found that the incident must be handled within a few hours on the same day to maintain business continuity and market competitiveness. How would you categorize such information security incident?

- A. High level incident
- B. Middle level incident
- C. Ultra-High level incident
- D. Low level incident

Correct Answer: B

QUESTION 3

Quantitative risk is the numerical determination of the probability of an adverse event and the extent of the losses due to the event. Quantitative risk is calculated as:

- A. (Probability of Loss) X (Loss)
- B. (Loss) / (Probability of Loss)
- C. (Probability of Loss) / (Loss)
- D. Significant Risks X Probability of Loss X Loss

Correct Answer: A

QUESTION 4

Identify a standard national process which establishes a set of activities, general tasks and a management structure to certify and accredit systems that will maintain the information assurance (IA) and security posture of a system or site.

- A. NIASAP
- B. NIAAAP
- C. NIPACP
- D. NIACAP

Correct Answer: D

QUESTION 5
